

Real Property Tax Assessment Information System
(RPTA)

User's & Technical Manual Version 1.0

Features & Functionalities

MODULE 1:
Property Assessment and Valuation

The features and functionalities of the RPTS was designed and customized to meet the requirement of the Local Assessor in facilitating the discovery, classification, appraisal, assessment and valuation of all real properties within his territorial jurisdiction which shall be used as the basis for taxation. Furthermore, the Tiwi RPTS-GIS will eventually facilitate the tax mapping and records management and the preparation of a Schedule of Fair Market Values of the different classes of real property in the Municipality of Tiwi.

1. Automate appraisal of real property records at current market value in accordance with Schedule of Base Market Values approved for the Municipal Government of Tiwi.

2. Automate printing of Tax Declaration/s

3. easy transfer of ownership due to subdivision/segregation of land and/or consolidation of two or more parcels into a single ownership as well as other transactions involving assessment of real property

4. easy to set tax exemption and apply appropriate assessment levels prescribed by the Sangguniang concerned

5. maintain database of all transfers, leases and mortgages of real property, rentals, insurance and cost of construction of buildings and other improvements on land, and land income for assessment purposes

6. easy to identify properties with duplication of assessment on one property and automate cancellation

7. easy to cancel assessment made in his name

8. automate preparation and printing of assessment rolls

9. automate preparation and printing of tax map control rolls

10. automate listing of cancelled TDs and ARPs

11. automate listing of Retired PINs

12. allow re-assessment in case of property suffered from substantial loss of value or re-assess property where improvements and repairs have been made upon the property subsequent to the last assessment.

13. inventory of all real property, whether taxable or exempt

14. print notice to the person (owner/claimant/administrator/occupant) in whose name the property is declared

15. Extensive Search Capability

16. Automatic posting to Journal of Cancelled Assessment (JCA), Journal of Assessment Transaction (JAT), Assessment Roll (AR), Notice of Assessment and Tax Bill (NATB)

17. System Security Access

18. Adjustment factor ready

User and Technical Manual

MODULE 1:
Assessment Operation

This technical document is designed to describe Specific Functionalities of the RPTS Modules and screenshots shall illustrate what to be seen in the workstation in operating the application. The front liners or end users for Property Assessment and Appraisal Module will help out be the Assessment Records Division and Appraisal Management and Assessment Division of the Municipal Assessors Office. The system requires initially setting up certain information before assessment data can be entered. The Data Standards on the following are required to be setup first:

1. Property Type
2. Classification Group
3. Property Level of Classification
4. Property Remarks
5. Plants and Trees
6. Unit
7. Building Kinds
8. Building Type of Structure
9. Building Classification
10. Building Structure and Class
11. Building Components
12. Building Extra Items
13. Adjustment Type
14. Adjustment Factor
15. Assessment Transaction
16. Machine Group
17. Province
18. Municipality
19. Barangay
20. Barangay Road
21. Owner Information
22. Assessment Levels
23. Schedule of Base Unit Value
24. Schedule of Building Cost
25. Schedule of Depreciation for Building
26. Schedule of Depreciation for Machine

To enumerate the steps of the whole process, individual properties are first entered containing the appraised and assessed value of the property and any relevant data. Data shall be taken from the Field Appraisal and Assessment Sheet (FAAS). The following reports can be generated from the data entered in this stage:

1. Annual Report
2. Idle Lands
3. Properties of owners
4. Certificate of With Property Holdings
5. Certificate of No Property Holdings
6. Certificate of With Improvements
7. Certificate of No Improvements
8. Notice of Cancellation
9. Notice of Assessment
10. Tax Map Control Roll
11. Assessment Roll
12. Records of Assessment
13. Monthly Assessment
14. Journal of Assessment Transactions
15. Journal of Cancelled Assessments
16. Assessor's Certificate

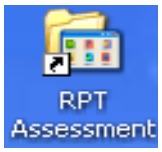

Once the assessed value and other relevant data for a property are entered, the corresponding real property tax for the property can be computed by the MTO. The taxpayer is billed through a payment advice. The payment advice is printed and given to the taxpayer. This advice contains the information on the property and the corresponding taxes and penalties or discounts, if applicable. The taxpayer then proceeds to make the payment. The following reports can be generated from this stage:

1. Abstract of real property receipts
2. Barangay Share

The succeeding discussions detail the different data entry screens and reports produced by the module.

GETTING STARTED

Locate the Real Property Tax Information System (RPTIS) icon on your windows desktop.

Double-Click the RPT Assessment icon.

When you start RPTIS, the Main Menu window as shown in figure 1 will be displayed. It contains three applications; Assessment Operations, Billing and Collection, and System Security. An application can be invoked by simply double-clicking its icon.

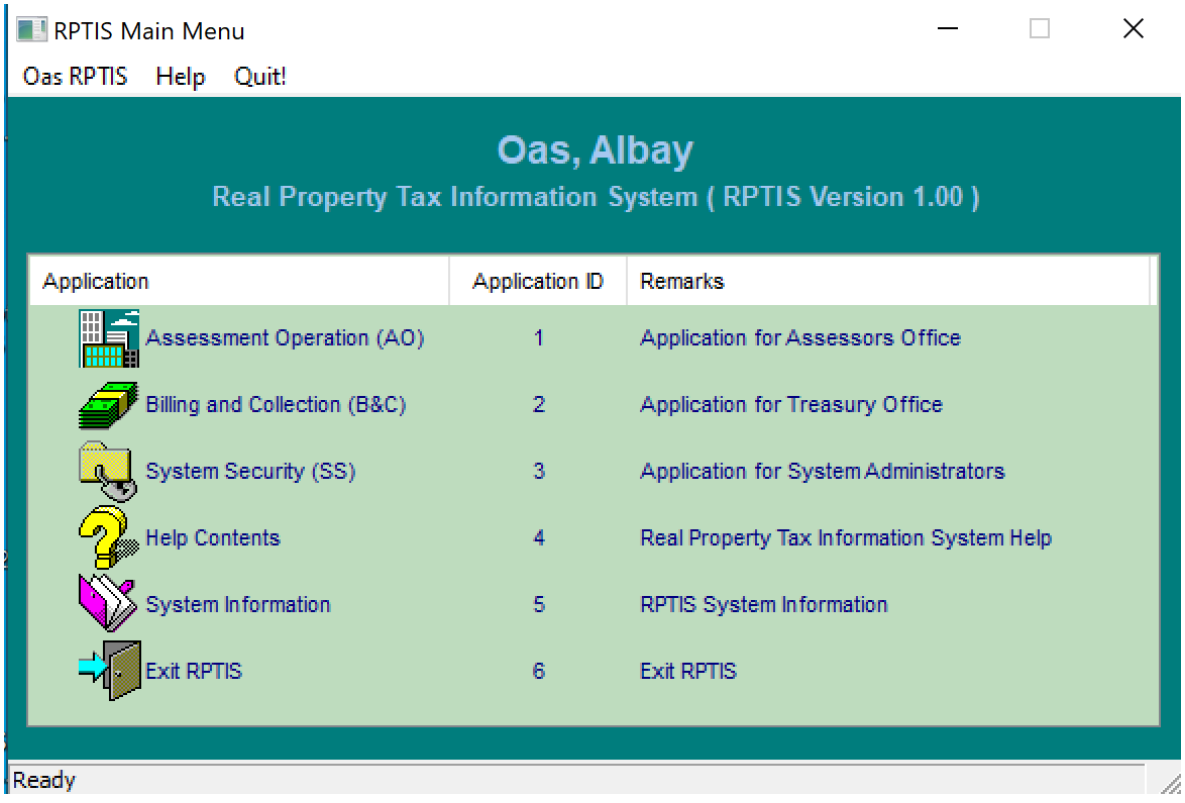

Figure 1

LOGGING INTO RPTIS

Upon invoking an application the User Access window appears as shown in figure 2. The user is required to enter a User ID and Password which will be validated against the security database. These would be your entry points to certain features of RPTIS.

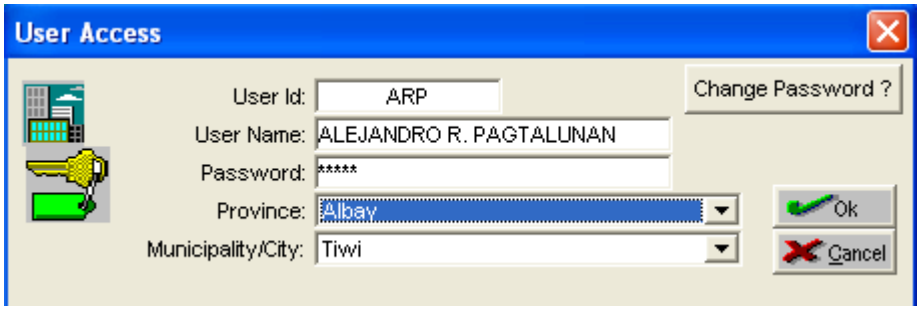

Figure 2

1. The User ID

The User ID must contain alphanumeric characters with a maximum length of 3 characters. All potential users of RPTIS must have a unique User ID. Take note that all User IDs are case sensitive.

2. The Password

The Password is the key to enter into an application system. Like User ID, a Password must contain alphanumeric characters with a maximum length of 25 characters. Password is case sensitive. Notice that as the user enters characters in the entry box, the password is not displayed, instead an asterisk will replace each character. This is to ensure confidentiality and security of your password.

If you enter an invalid password, you are still given a chance to re-enter the password. However, if you enter an invalid password three (3) times, the program will terminate and return you to the Windows desktop.

Access Definition

Prior to running RPTIS, access definition must be established by the System Administrator. This will include user rights declaration and feature assignments.

DATA MANIPULATION

The Action Menu

Action Menu as shown in figure 3 is consisted of the following sub-menus: Add, Edit, Delete, Save, Cancel, Print, Printer Setup, Save As, Toolbars, and Search. This will be used in all data manipulation for both transaction and referential entries whether Assessment Operations or Billing and Collection Module.

The Menu Icons/Toolbars

The following toolbars/icons are shortcuts in invoking data manipulation commands. If you place the mouse pointer on an icon and pause, a brief description of the icon's function is displayed. Clicking on the icon invokes its function.

 ***Add***	Add new record
 ***Edit***	Edit an existing record
 ***Delete***	Deletes an existing record
 ***Save***	Save current record
 ***Cancel***	Cancel changes
 ***Search***	Search an existing record
 ***Print***	Print data in current window
 ***Printer Setup***	Configure printer setup
 ***Toolbars***	Change toolbar settings
 ***Save As***	Save data in current window as text, dbf, etc.

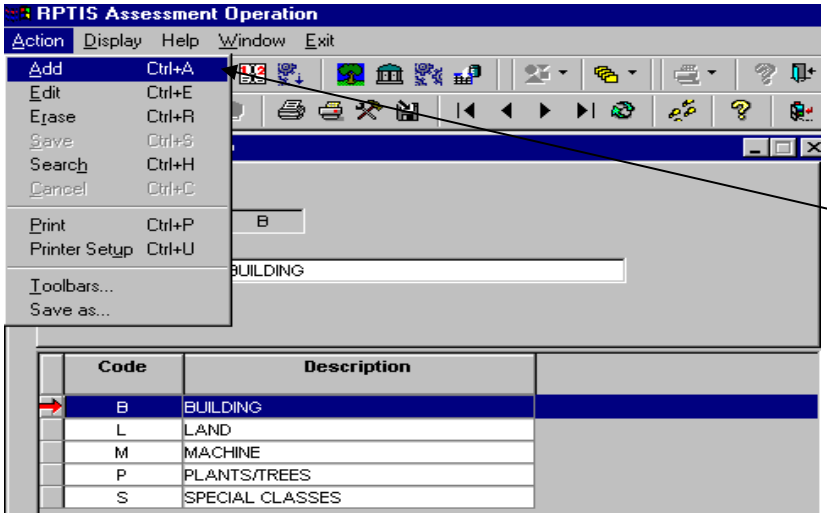

❖ ***The addition, modification, and deletion of records for all reference files follows only one procedure.*** Displayed below are the steps for easy file maintenance.

To add new record:

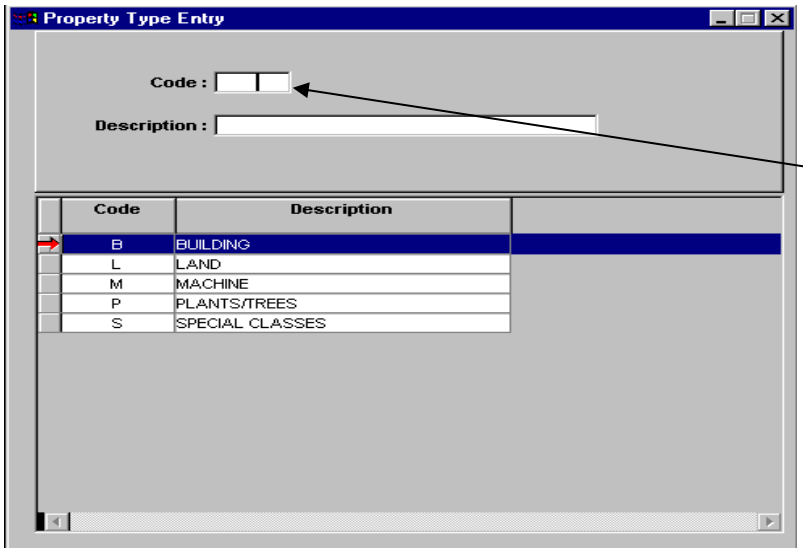

Click Add Icon from the toolbar

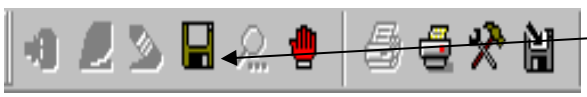

Or

Click Action from the menu bar then select Add or use the shortcut keys displayed on the right side of each sub-menu. In this case press Ctrl + A simultaneously.

Input required data for each field

Click Save icon from the toolbar to save new record

Figure 3

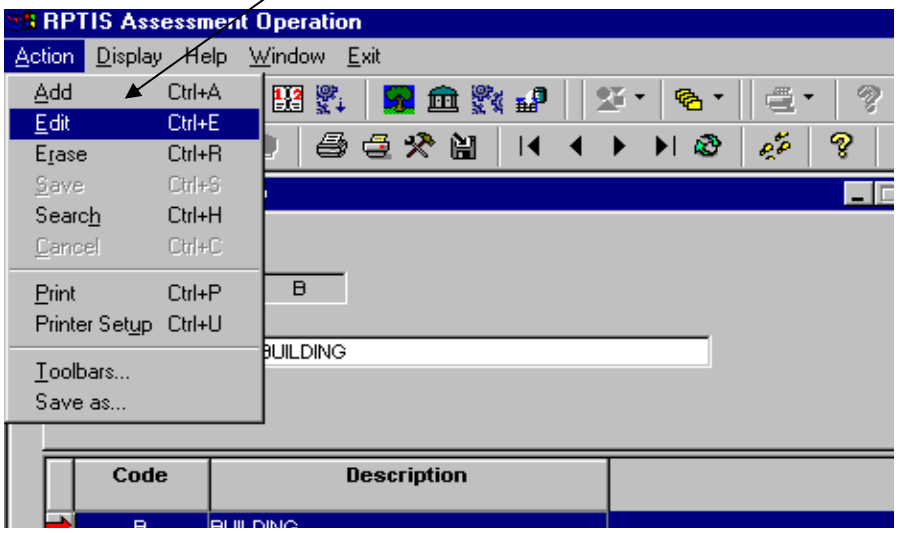

To edit existing record:

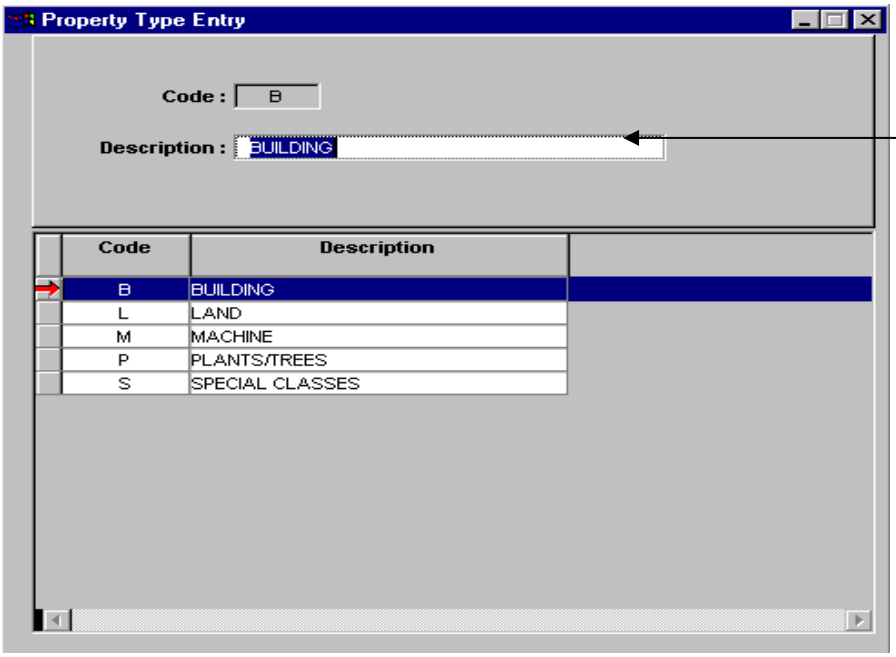

Click Edit Icon from the toolbar

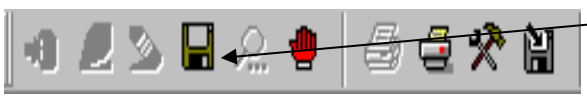

Or

Click Action from the menu bar then select Edit menu

Select field to modify then make necessary changes.

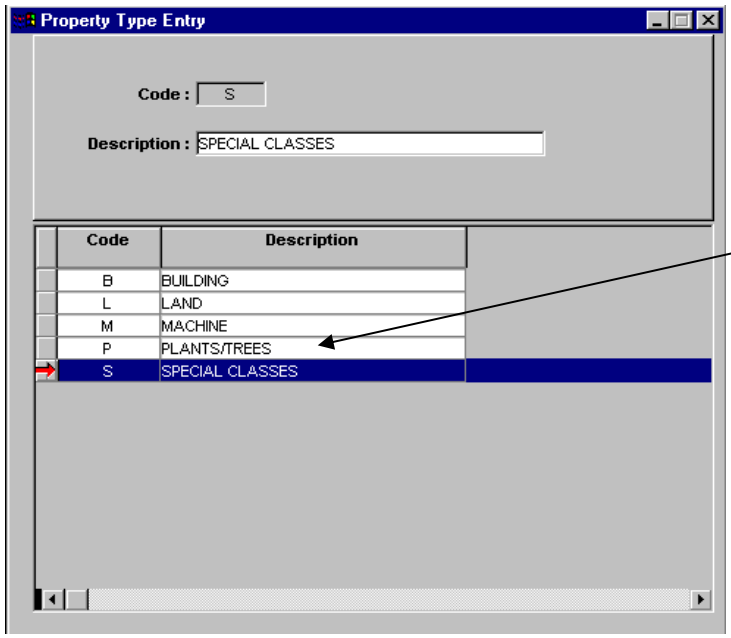

to

Click Save icon from the toolbar

save changes

Figure 4

To delete an existing record:

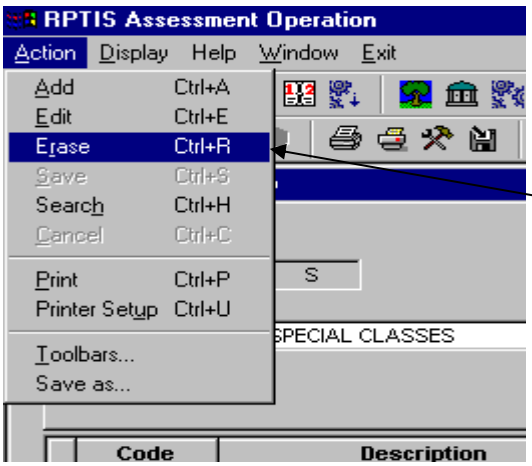

Click on the record you want deleted

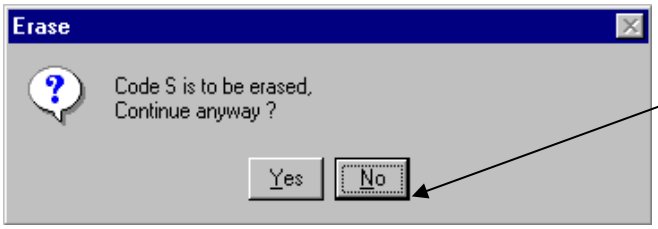

Click Erase icon from the toolbar

Or

Click Action from the menu bar then select Erase or press Ctrl + R simultaneously

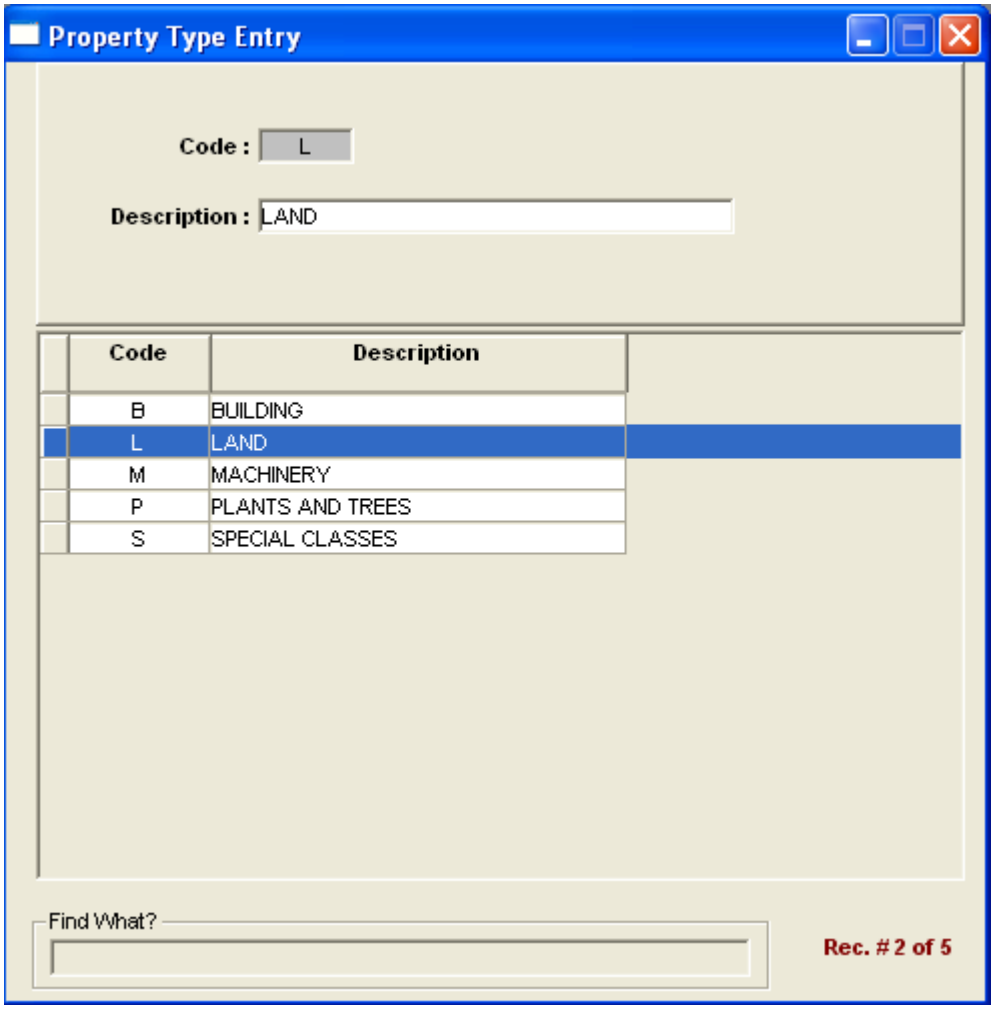

Click on “Yes” button to erase selected record otherwise click “No” to cancel operation

Figure 5

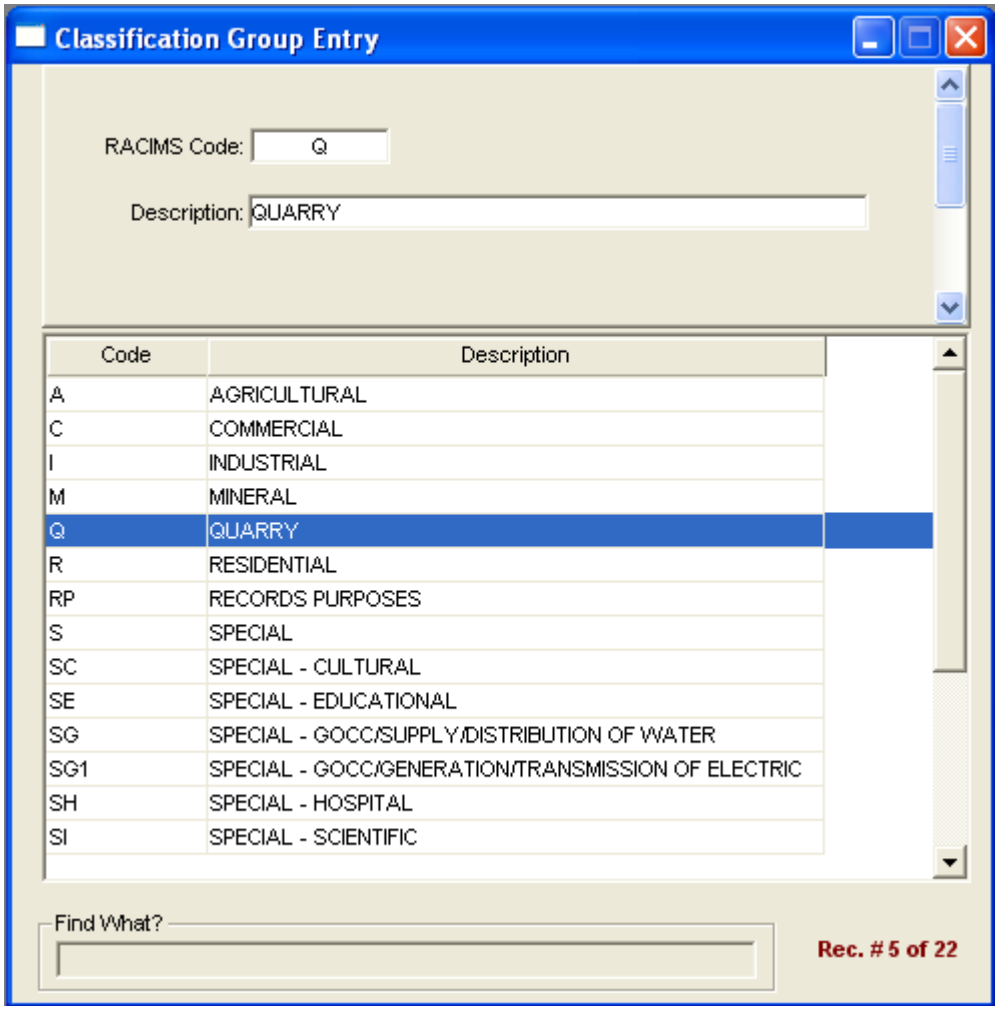

1 Setting Up the Property Type

The data manipulation functions previously mentioned in figures 3, 4 and 5 are in the same way applicable to the following Referential File Windows:

This is property type setup where the type of property is entered. The values inputted are used in FAAS entry.

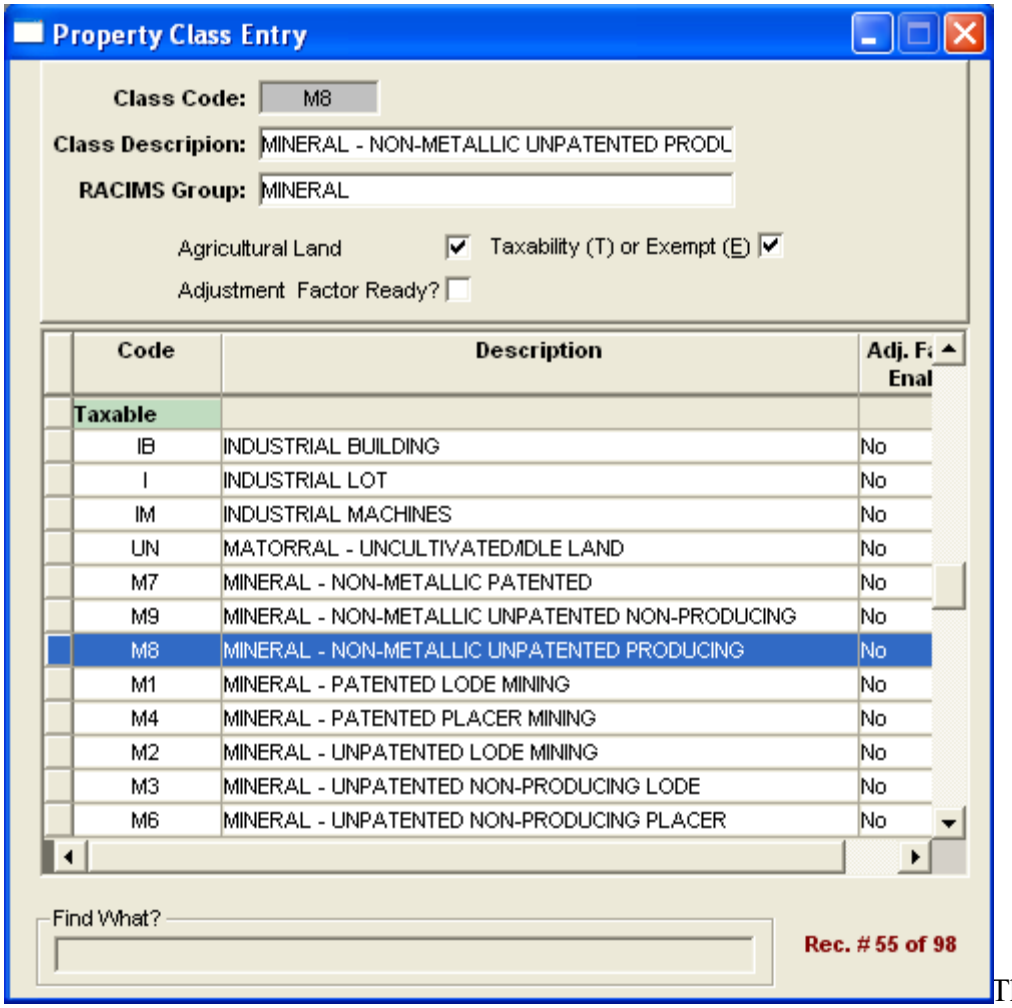

2 Setting Up the Classification Group

This is classification group setup where the RACIMS group of property is entered. The values inputted are used in Property Classification setup

3 Setting Up the Property

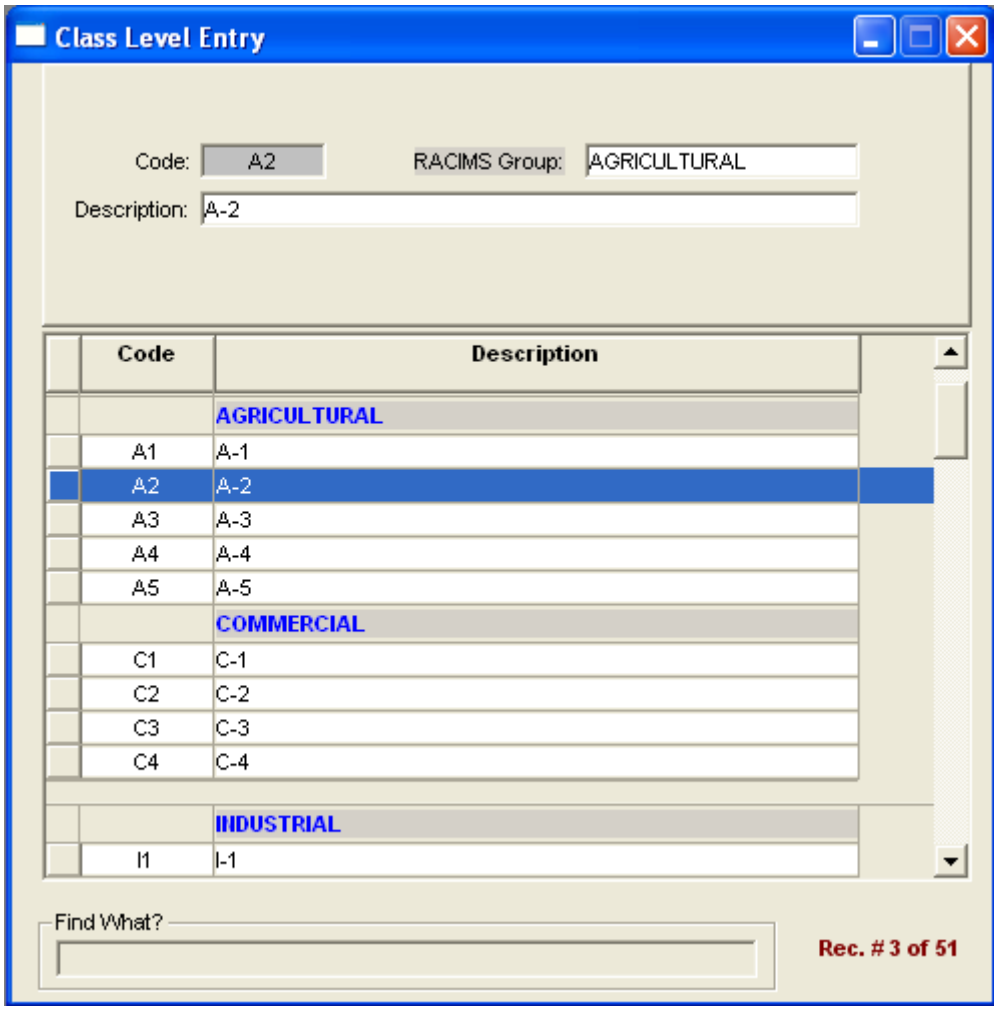

Classification

The
