Schedule of Building Cost Entry has the following items: Building Type of Structure, Building Classification, Building Kind, Poor, Fair, and Good Amount of Building, and Effectivity Year of Assessment as indicated by Year From and Year To.

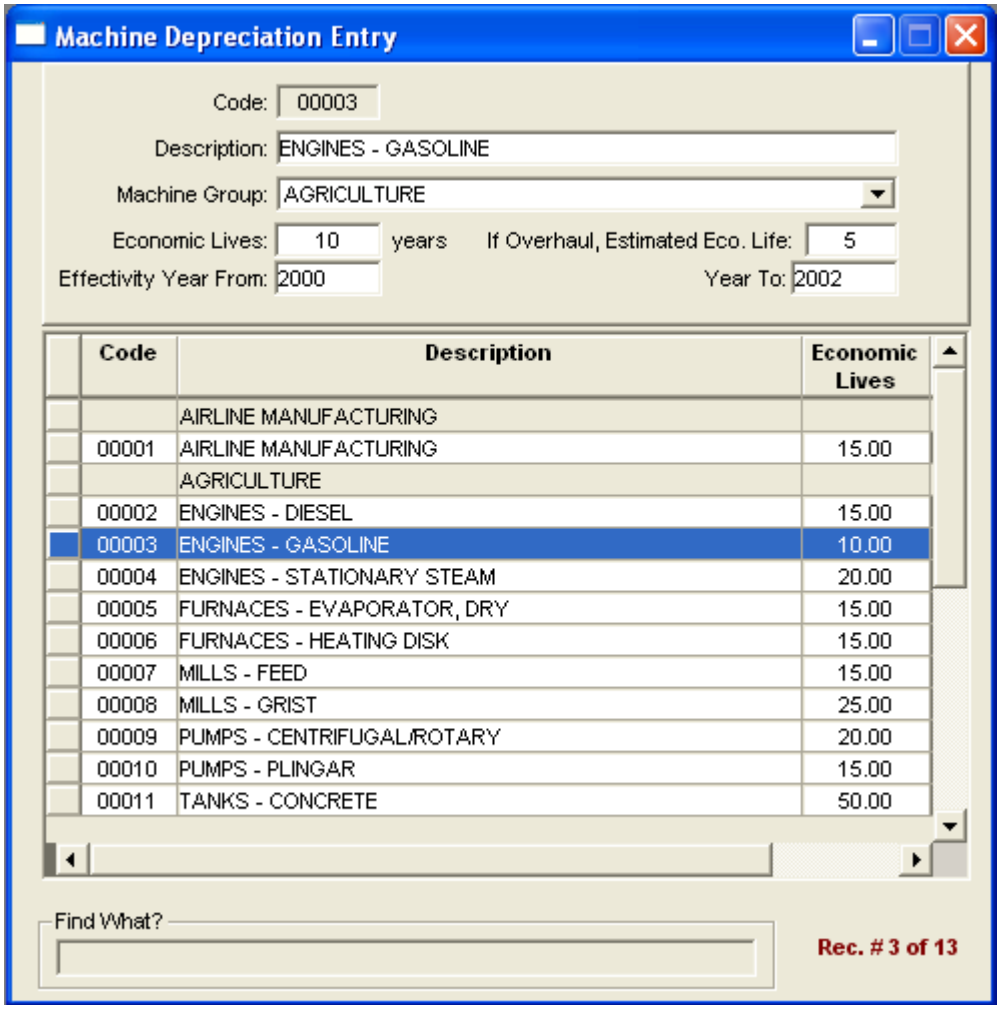

.

# 25 Setting Up the Schedule of Building Depreciation

Composed of Building Structure, Classification, Age of Building as indicated by Stage From and Stage To, Rate of Depreciation, and Residual Value of Building.

# 26 Setting Up the Schedule of Machine Depreciation

This setup is composed of the following items: Machine Code, Machine Description, Machine Group and Economic Life of Machine.

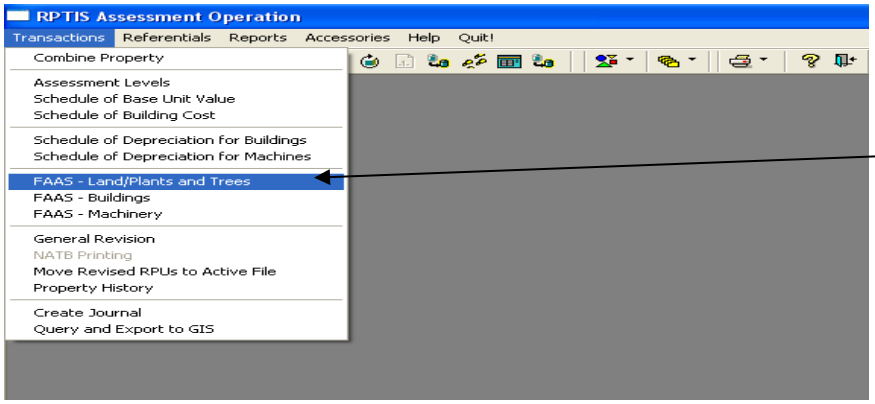

# 26 Field Appraisal & Assessment Sheet (FAAS) – Land/Plants & Trees

Every property is separately assessed and appraised. A Field Appraisal and Assessment Sheet (FAAS) report is prepared for each property (land/plants and trees, buildings, or machinery).

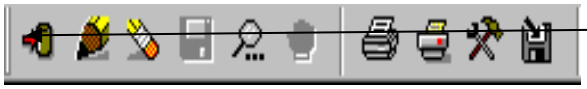

FAAS becomes the basis for updating other records on the assessor's and treasurer's offices and effectively is the basis for tax collection.

- ***The addition, modification, and cancellation of records for all FAAS files (Land, Building, and Machinery) follows only one procedure.*** Displayed below are the steps for easy file maintenance.

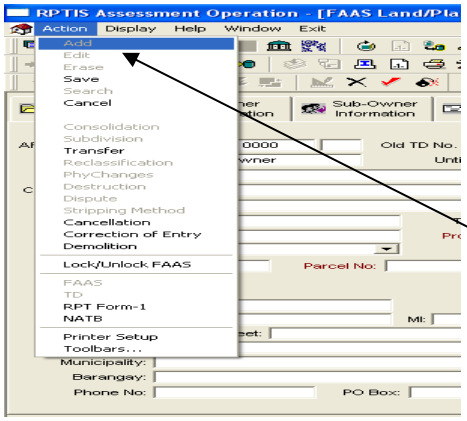

## To Add new entry in FAAS – Land/Plants and Trees:

Select FAAS from Transactions menu bar

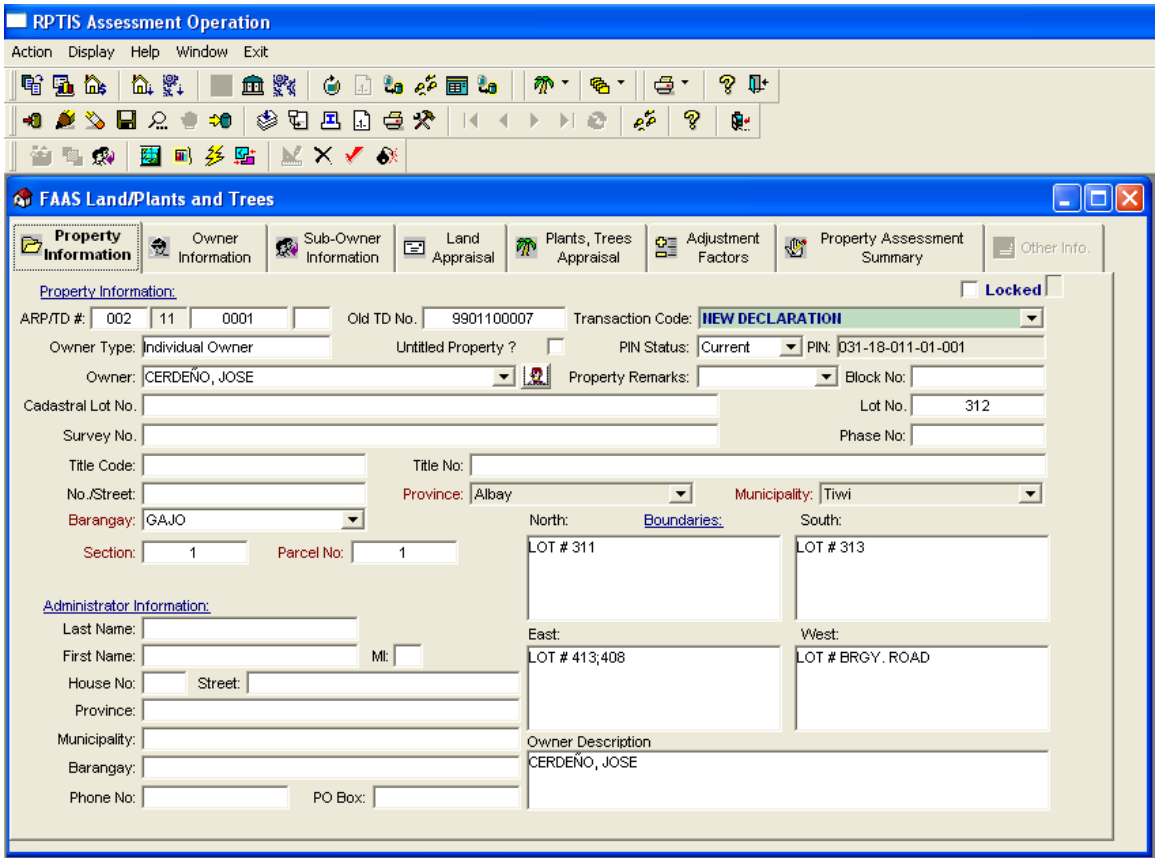

Click Add Icon from the toolbar or

Click Action from the menu bar then select Add or use the shortcut keys displayed on the right side of each sub-menu. In this case press Ctrl + A simultaneously.

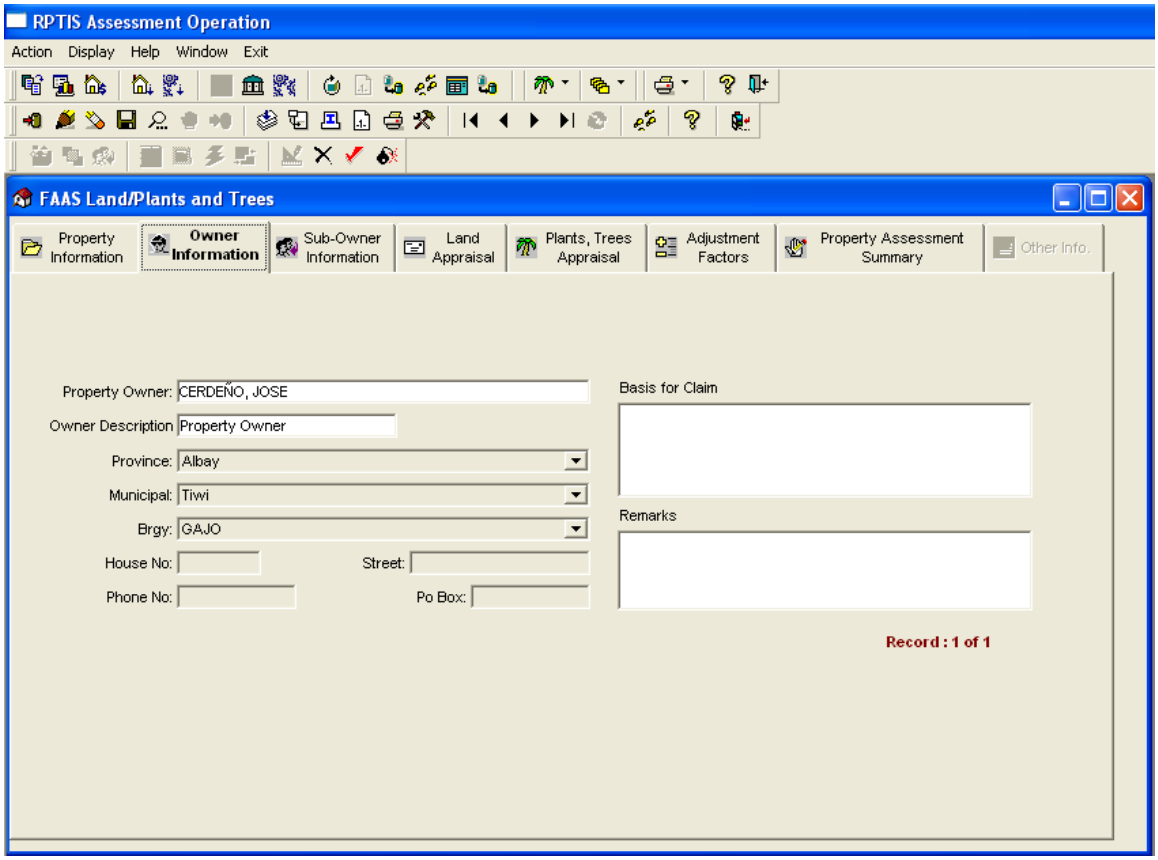

FAAS information are sub-divided into several folder tabs. Data manipulation functions from the Action menu bar applies to all tab pages. A FAAS entry is only considered completed when all required fields from the following tab pages are filled up:

## The Property Information

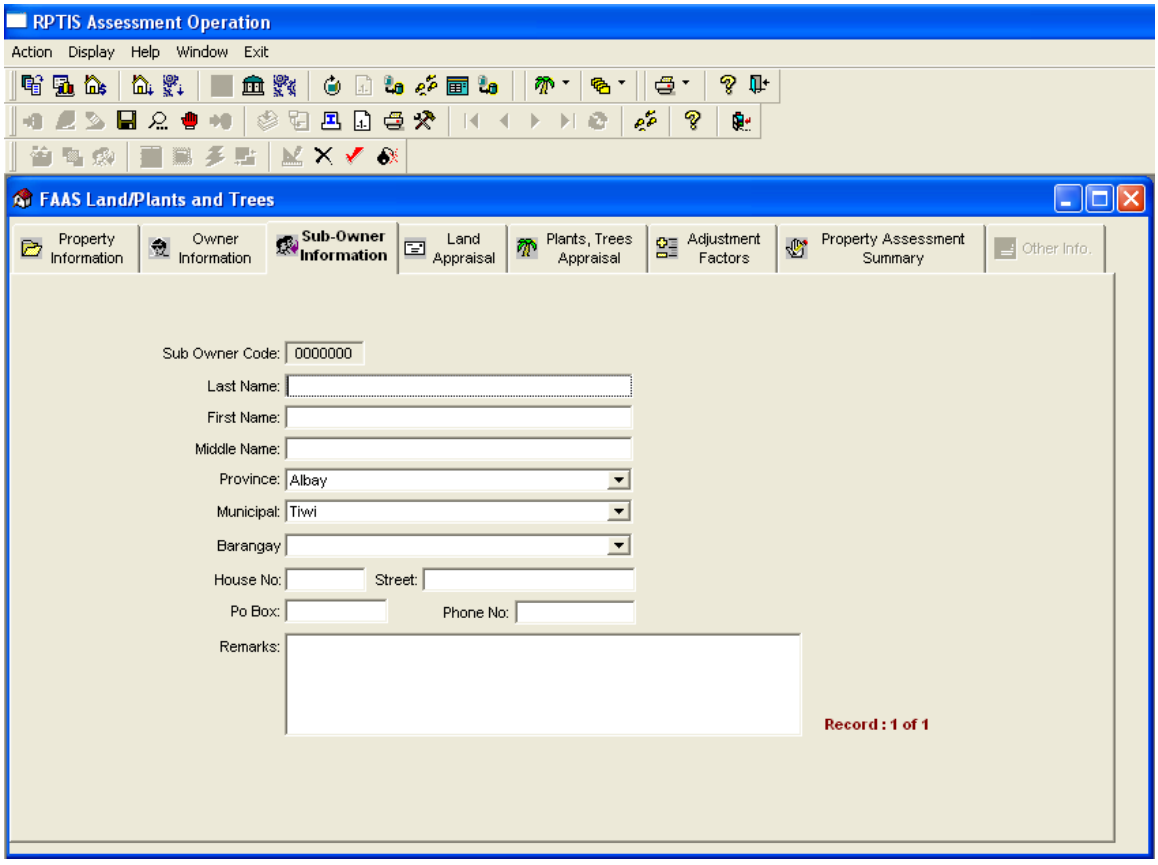

Input required data for each field. This tabpage contains basic information on the property such as; ARP No, Boundaries, Section, Title Reference, etc. PIN is automatically generated by the system after inputted the required fields. Fields having a dropdown datawindow will only accept data from the selection being displayed. All referential files must be completely set up prior to any FAAS entry. However, this tabpage has an added feature of invoking the most commonly used Owner Referential File window by clicking on the icon located at the right side of the owner field, which means adding records to the Owner Referential file can be done from this tabpage. This would ease the user of having to close the FAAS window and add the new owner first to the Referential Files then invoke the FAAS window again . Upon filling up the required fields click on the Save Icon to add the new record to the database.

## The Owner Information

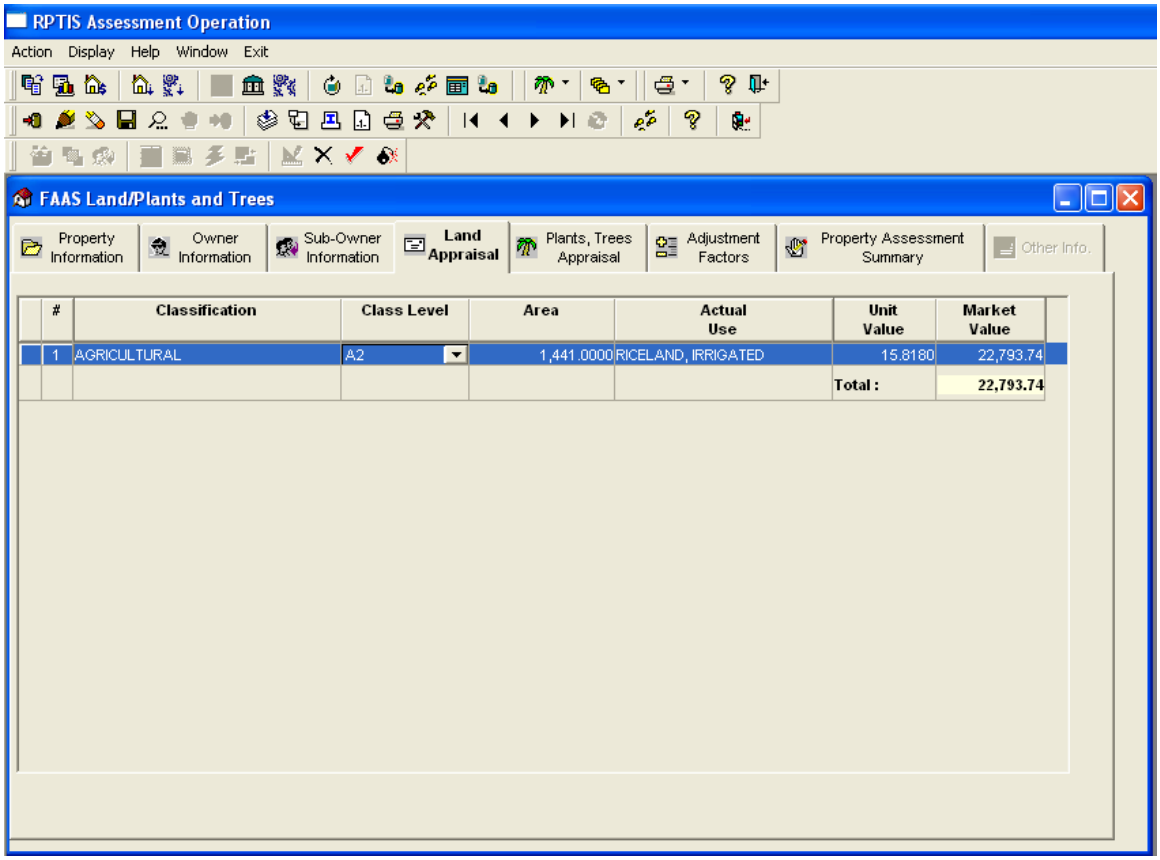

Input required data for each field. This tabpage should indicate whether the owner is a claimant or a property owner. Most of the data are just retrieved from the Owner referential file except for the 'basis for claim' and 'remarks' which are optional columns. Likewise, click on the Save Icon to save the new entry.

## The Sub-Owner Information

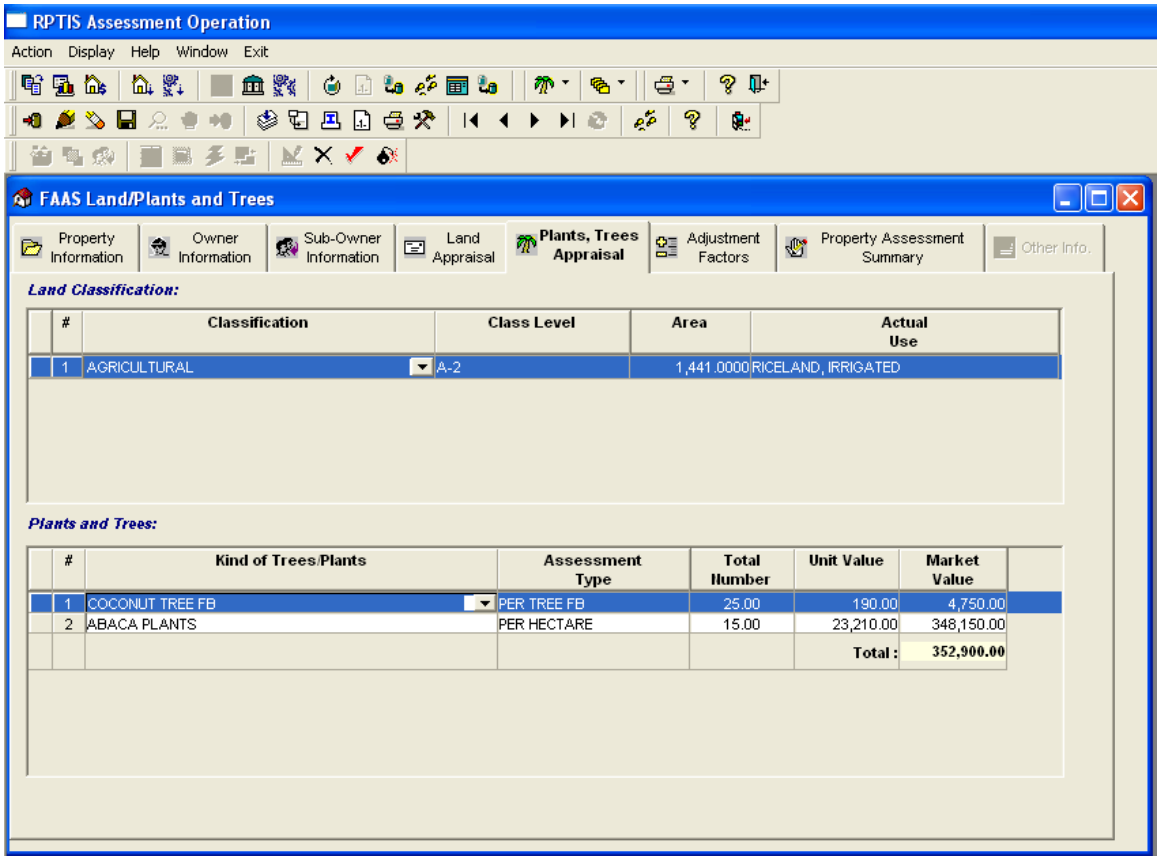

This tabpage should contain sub-owner information. Likewise, select Add from the Action menu bar to add a new record. All columns are required to have a value except for the 'house no', 'po box', 'phone no', and 'remarks'.

## The Land Appraisal

Land Appraisal entry encompasses Appraisal and Assessment of Land property. The property appeared in the FAAS is assessed by the Assessors. Land is assessed based on: land classification, classification level, land area, actual land use, and based unit value per square meters. The market value of assessed land property is automatically calculated.

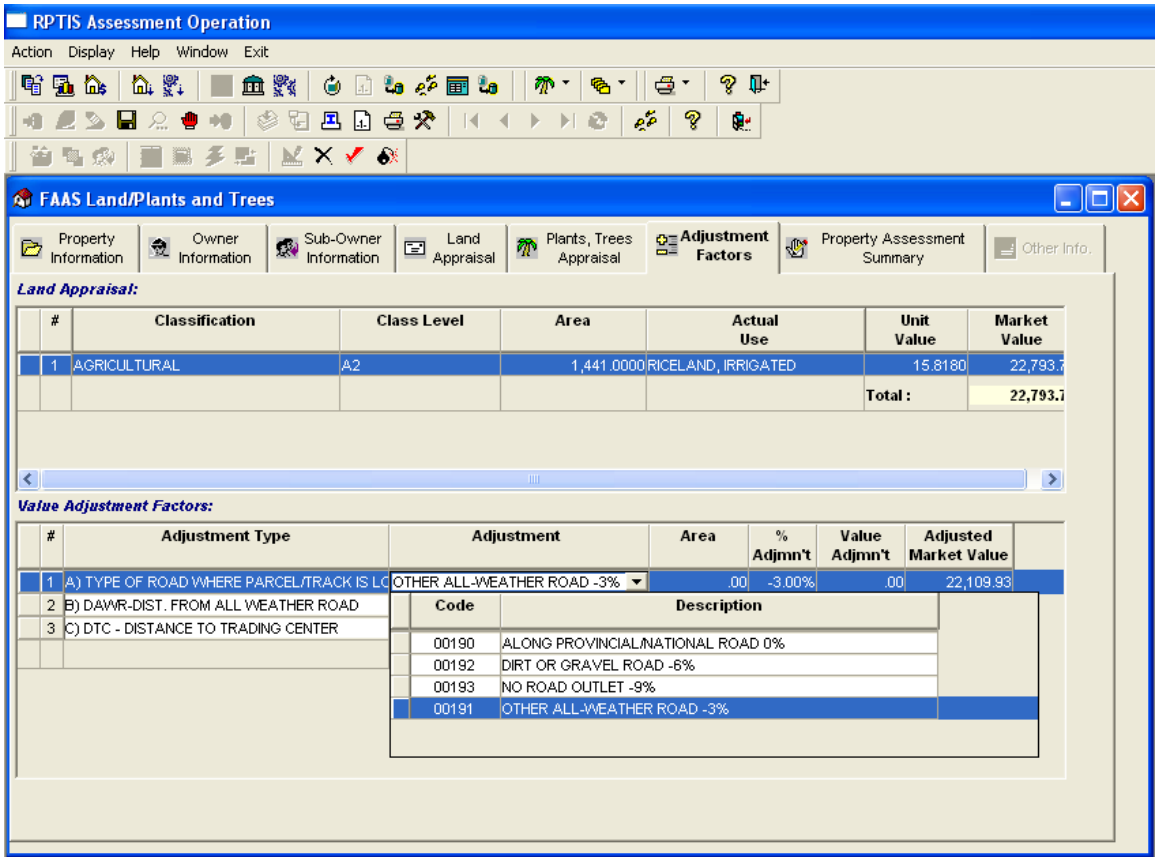

## The Plants and Trees Appraisal

This folder tab contains two datawindows; the land classification and plants and trees. To add an entry in the plants and trees datawindow, select a record from the land classification which in effect would indicate where the plants and trees are located, then click Add from the Action menu bar. In the same way, input all required data to derive the market value for each entry.

Plants and Trees are assessed based on: the kind, type, age, total number, and the unit value of plant/tree. The market value of plants/trees is automatically calculated.

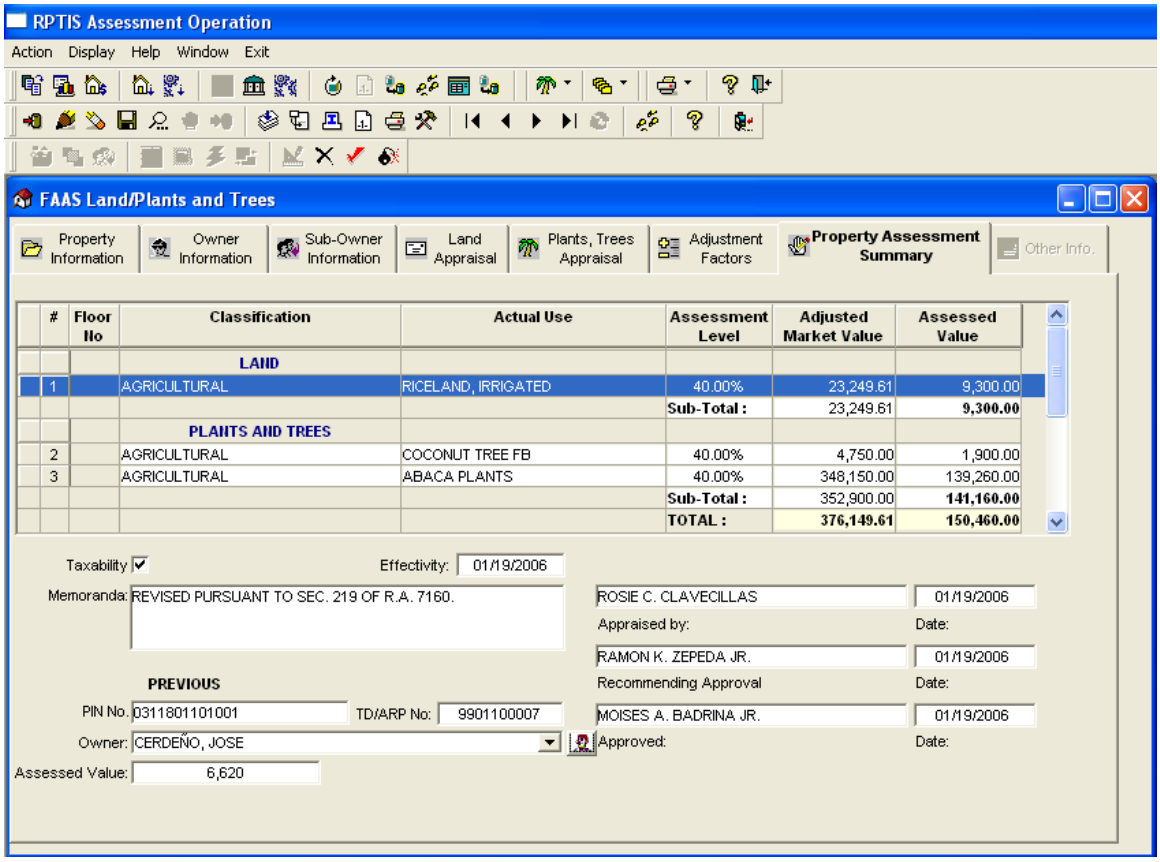

## The Adjustment Factor

Where applicable, adjustment factors are declared in the assessment of land. The reason for doing this way is to simplify subsequent computations when market value of property is changed. Indicate the land value factor adjustment, the type of adjustment, the rate of adjustment and the market value is computed. Apply the appropriate assessment level to determine the assessed value, indicating the year of effectivity of the assessment.

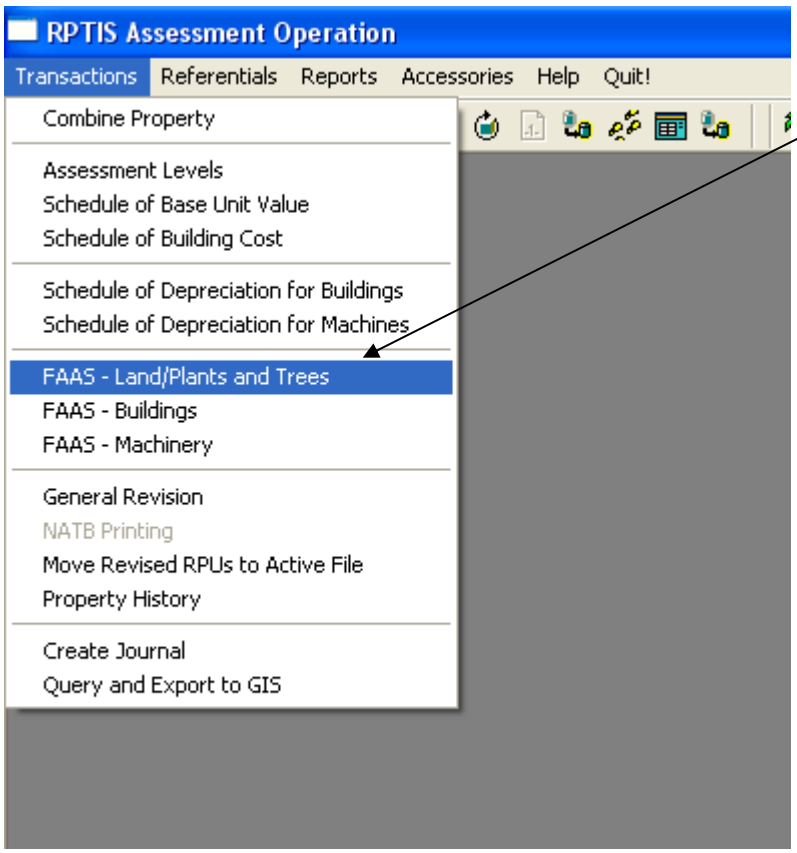

This tab page also contains two datawindows; the land appraisal and value adjustment factors. Same with the plants and trees tab page adding an entry will require a selected record from the land appraisal datawindow to indicate where the adjustment factors are being applied, afterwhich, the Add Icon should be selected.

## The Property Assessment Summary

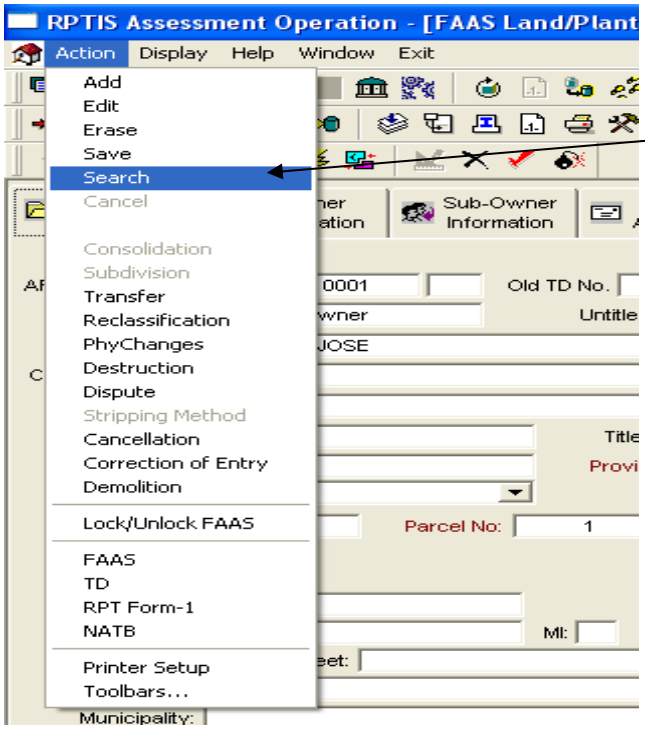

This is where the assessed value for each property classification is displayed. Fields like ‘previous pin no’, ‘previous td no’, ‘previous owner’, and ‘previous assessed value’ are all editable but not required columns.

**To Modify an existing FAAS:**

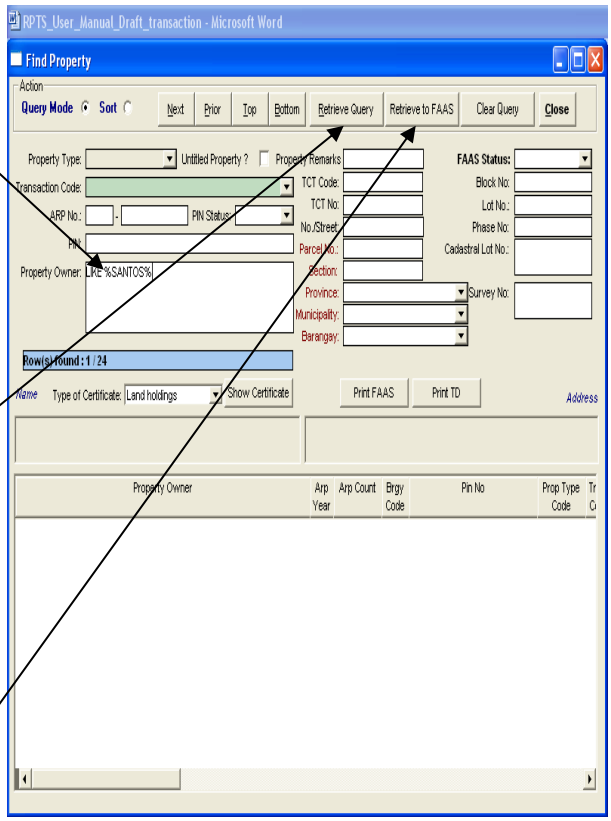

Select FAAS from Transactions menu Bar

Click on Search from Action menu bar to display the search window

Input desired data into the blank fields which will serve as the criteria for the search.

Click on Retrieve Query button to effect the search. If a criteria is satisfied the number of records retrieved will be displayed on the bottom of the window as shown in figure 6. Otherwise, a blank screen will be displayed as shown in figure 7.

Click on Retrieve to FAAS button then close the search window to display the FAAS folders as shown in figure 8.

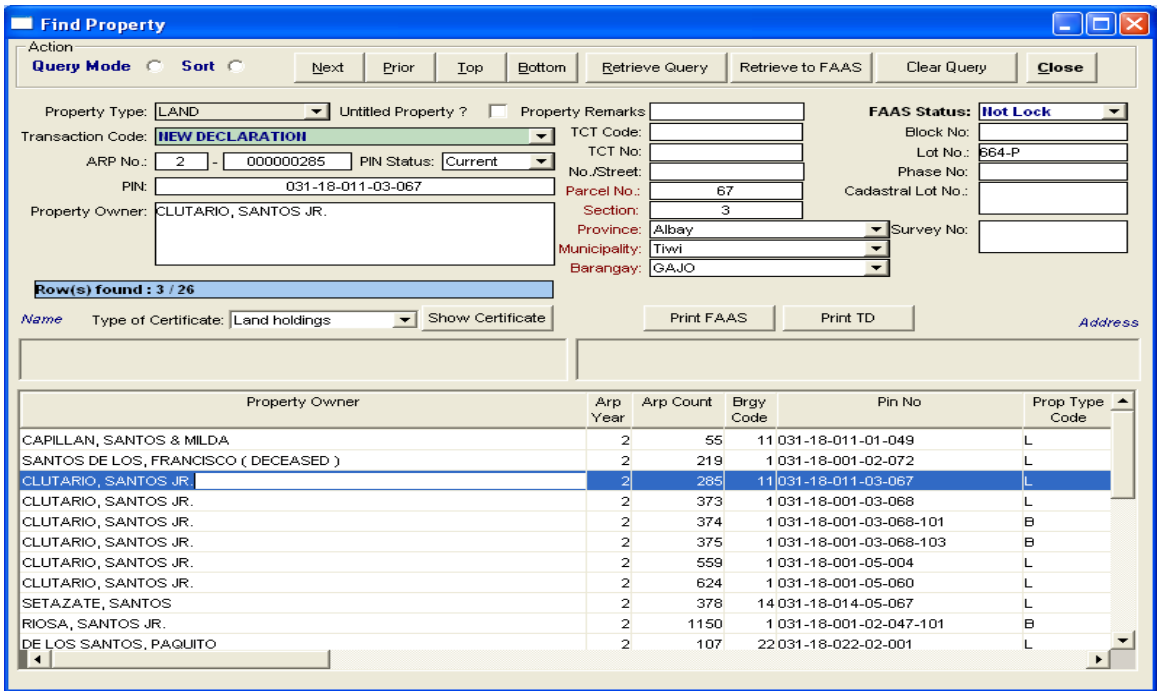

Figure 6

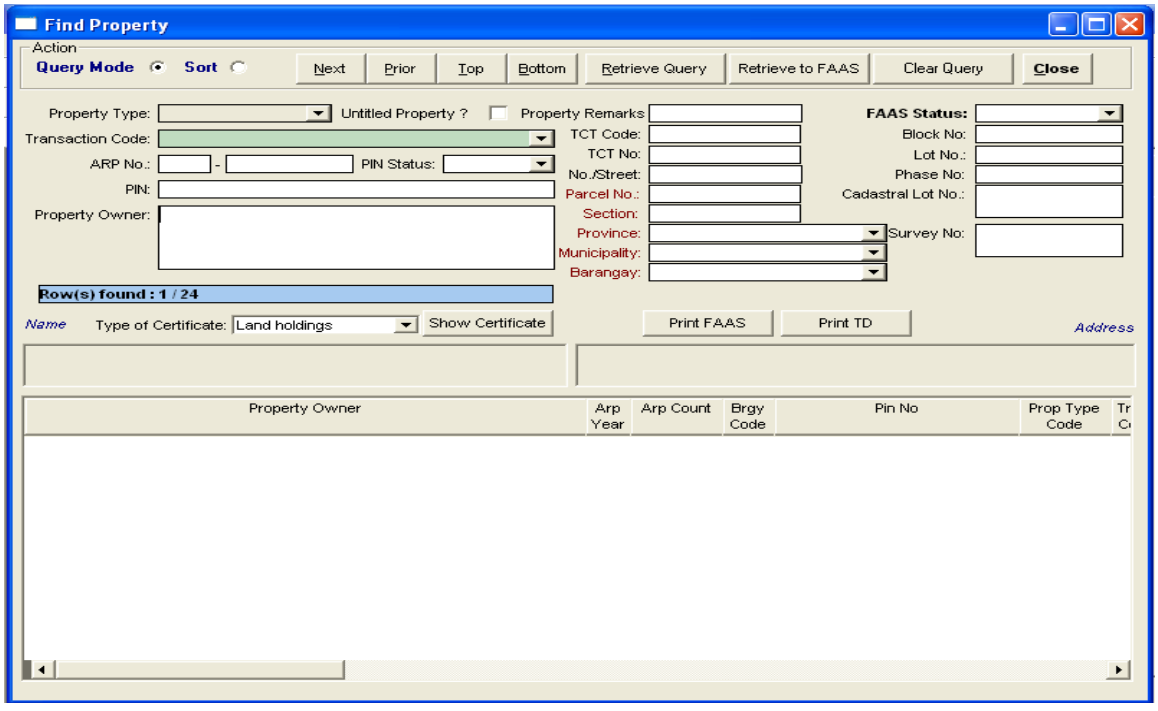

Figure 7

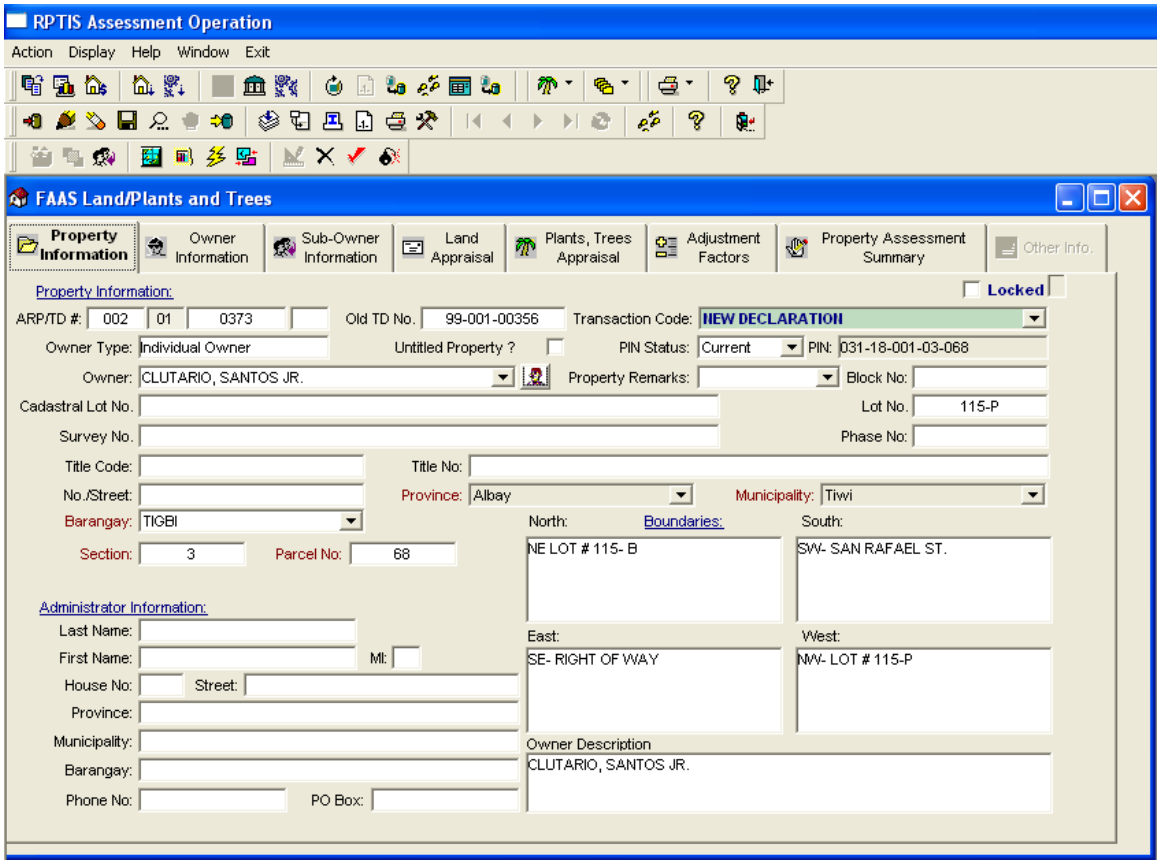

Figure 8

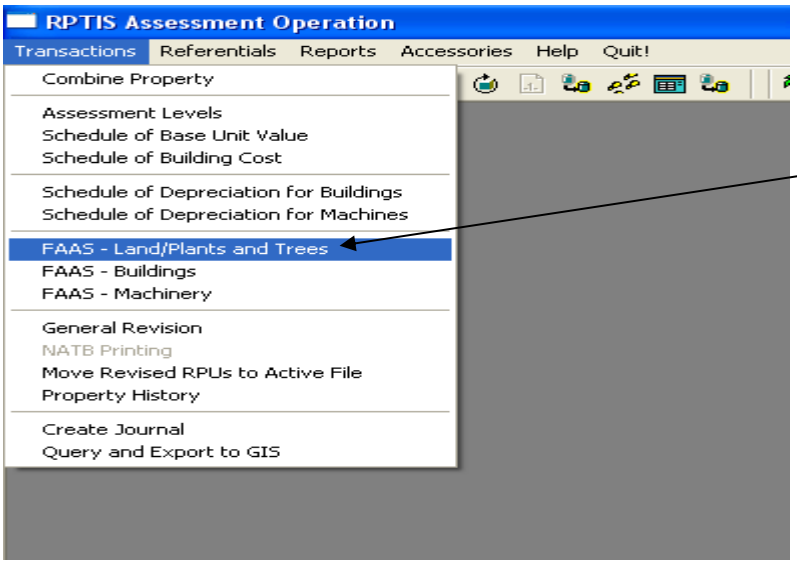

Click on Edit icon from the toolbars to make the fields editable, then do the necessary changes.

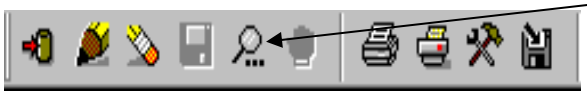

Click on Save icon to save changes.

# 27 Reclasification

Select FAAS from the transactions menu bar to display FAAS folders

Figure 9

Click on search icon from the toolbar to display your selected records in FAAS as shown in figure 10.

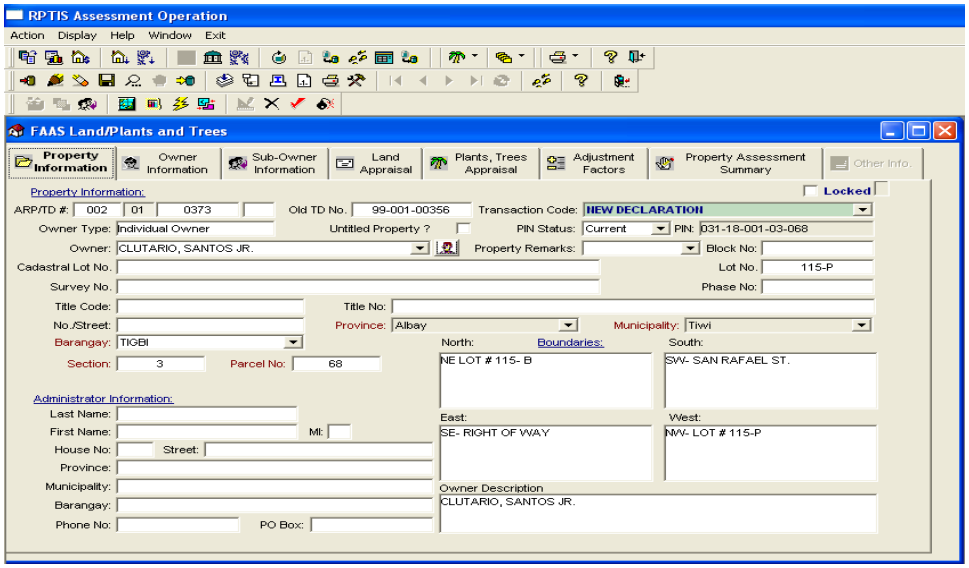

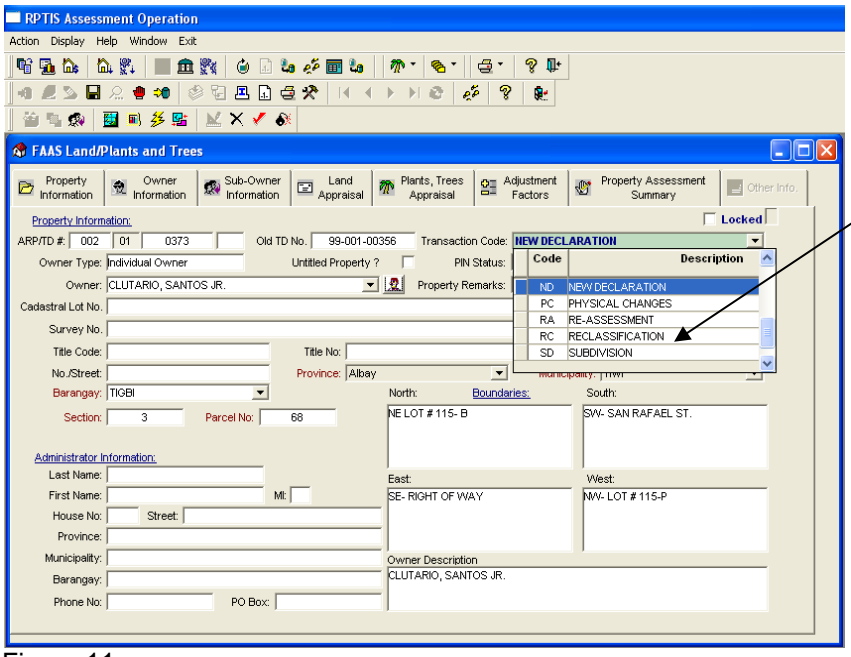

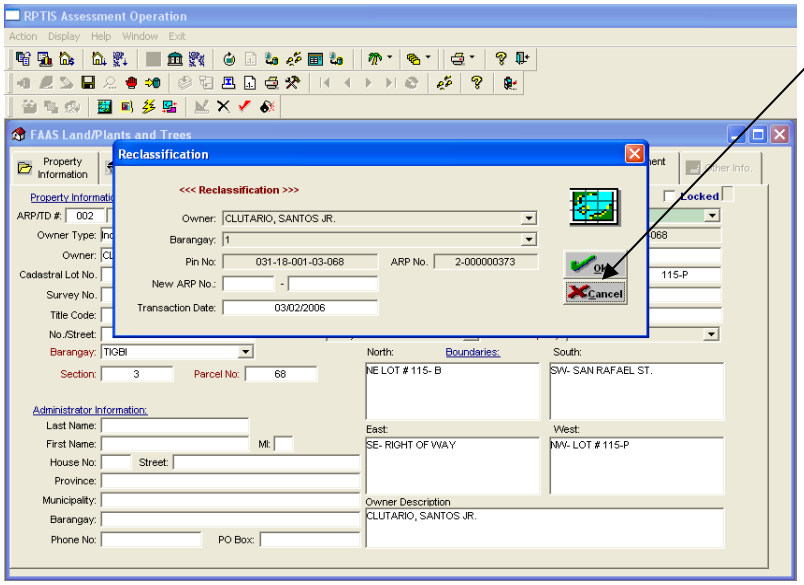

Figure 10

From the selected record in FAAS window select a transaction reclassification from the dropdown selection.

Figure 11

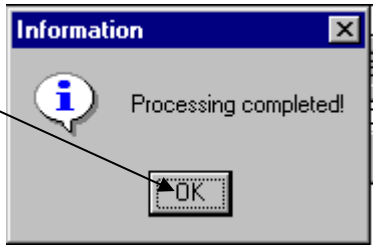

Upon clicking on reclassification as transaction code this popup window will be displayed. Input necessary data of the FAAS being reclassified including its old pin no and new pin no, then click Ok button to close this window.

Click on Yes button to Effect the re-classification

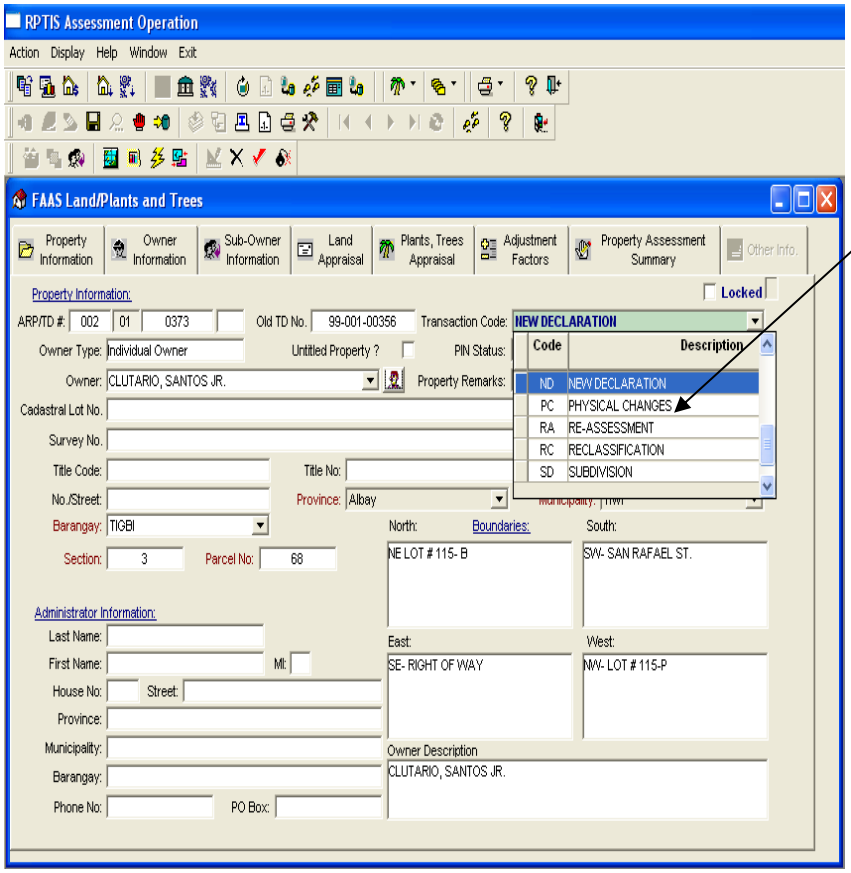

Upon saving the reclassified property this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

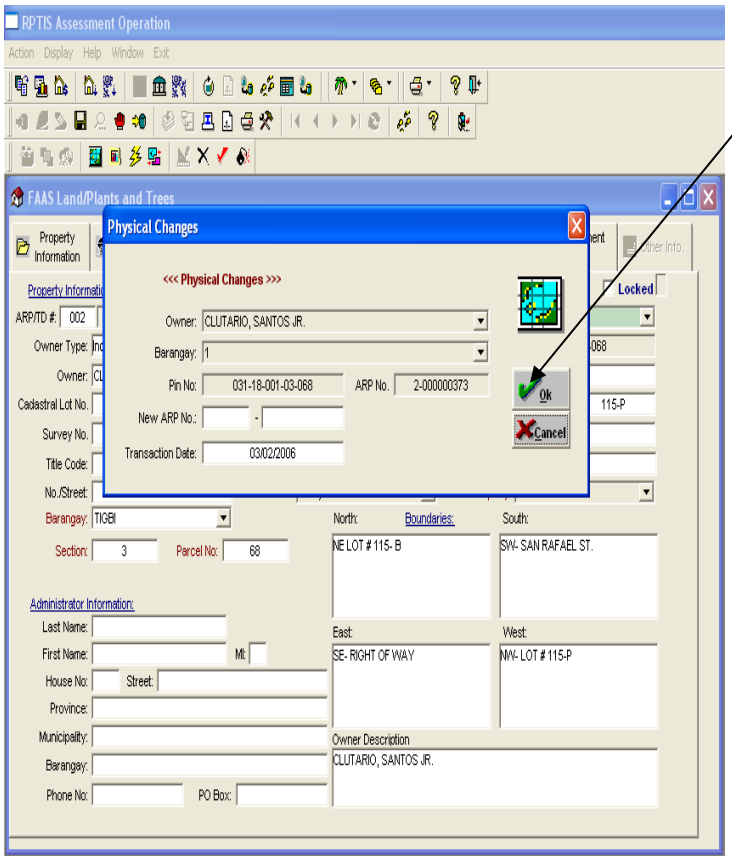

# 28 *Physical Changes*

**Please follow the steps in Figure 9 to 11.**

From the selected record in FAAS window select a transaction physical changes from the dropdown selection.

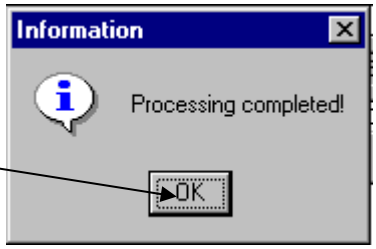

Upon clicking on physical changes as transaction code this popup window will be displayed. Input necessary data of the FAAS, then click Ok button to close this window.

Click on Yes button to Effect the physical changes

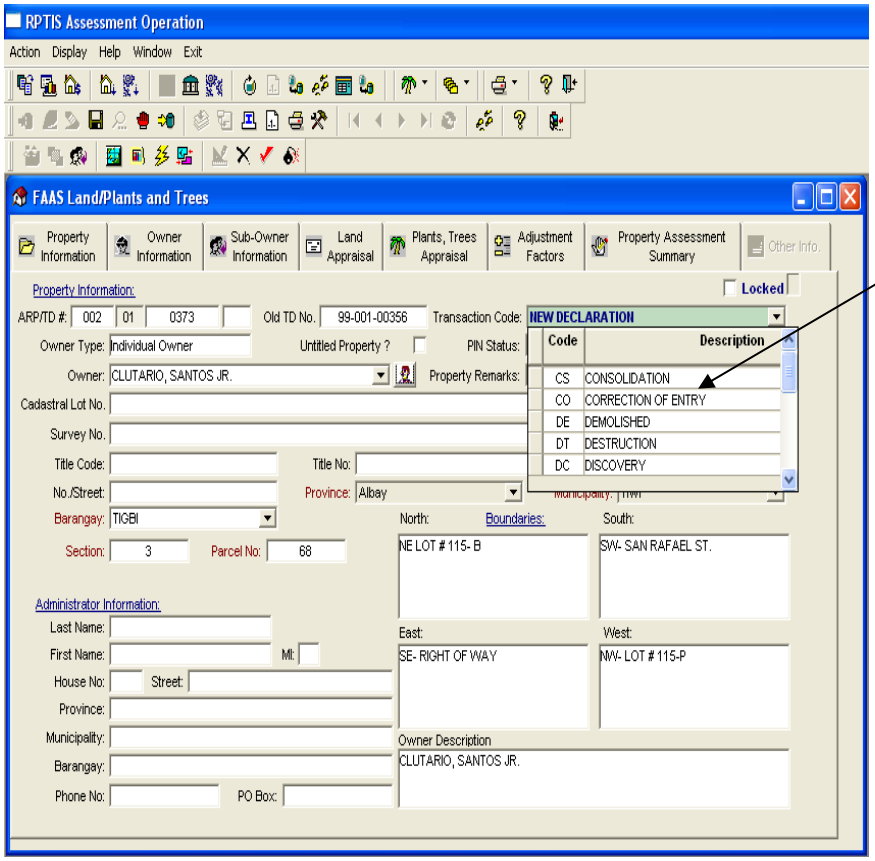

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

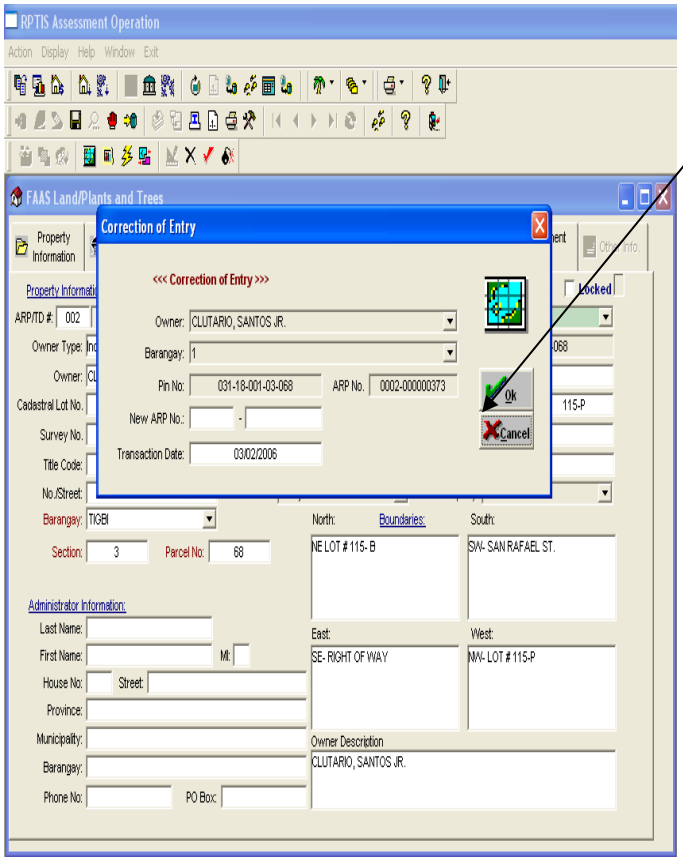

# 29 Correction of Entry

**Please follow the steps in Figure 9 to 11.**

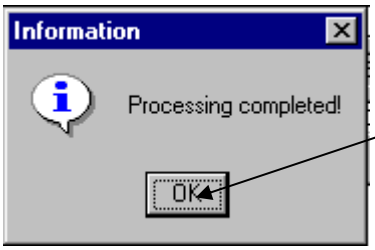

From the selected record in FAAS window select a transaction correction of entry from the dropdown selection.

Upon clicking on correction of entry as transaction code this popup window will be displayed. Input necessary data of the FAAS being corrected, then click Ok button to close this window.

Click on Yes button to
Effect the correction entry

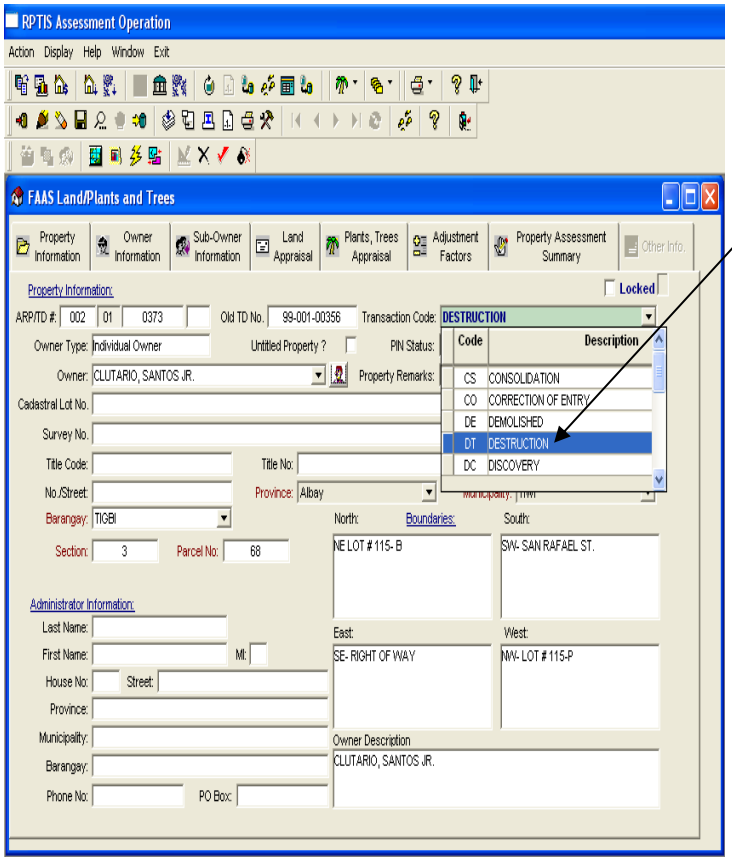

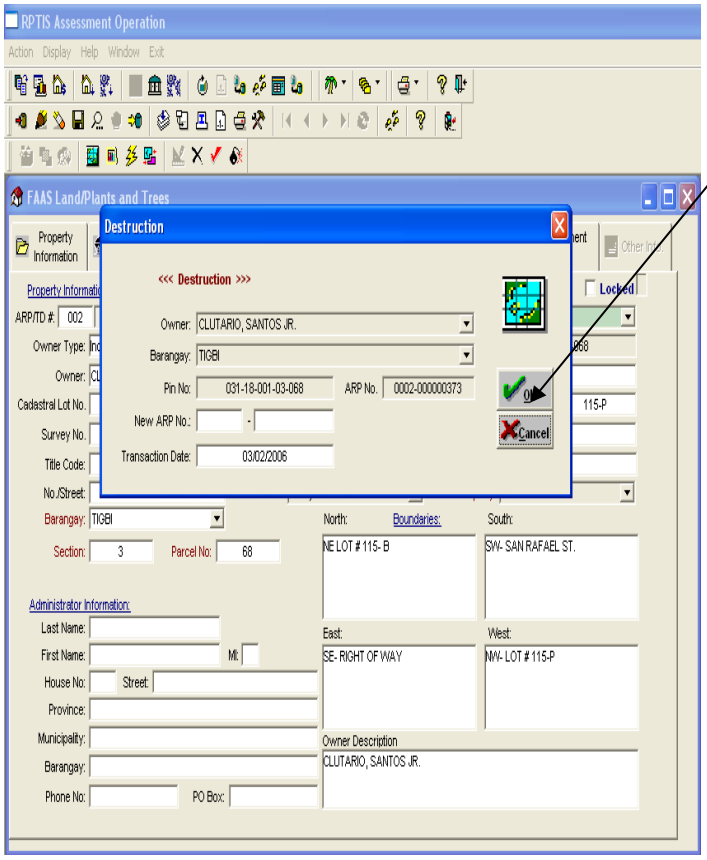

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

# 30 Destruction

**Please follow the steps in Figure 9 to 11.**

From the selected record in FAAS window select destruction as transaction from the dropdown selection.

Upon clicking on destruction as transaction code this popup window will be displayed. Input necessary data of the FAAS, then click Ok button to close this window.

Click on Yes button to Effect the destruction

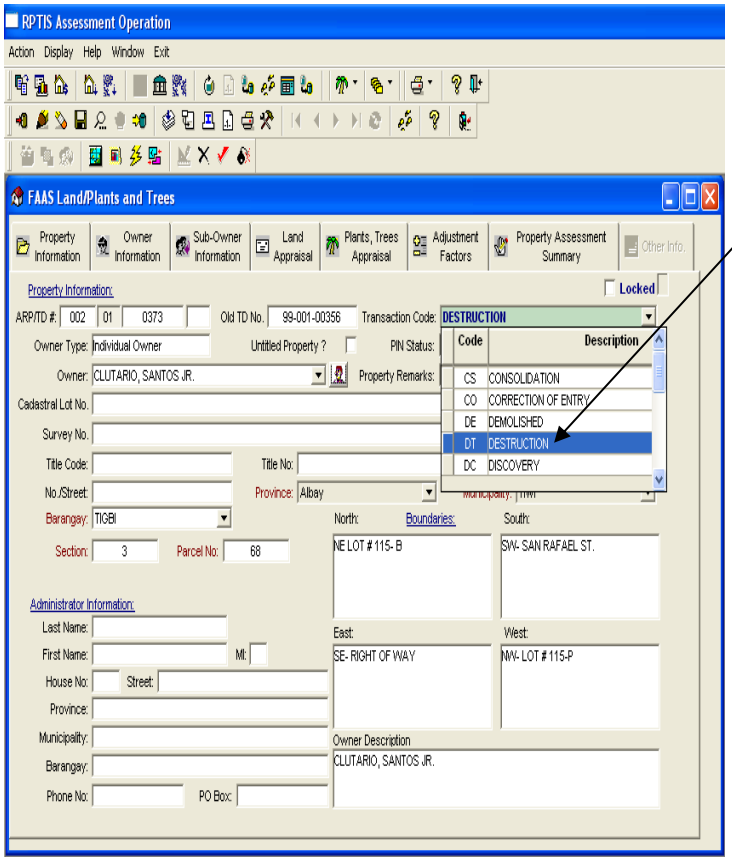

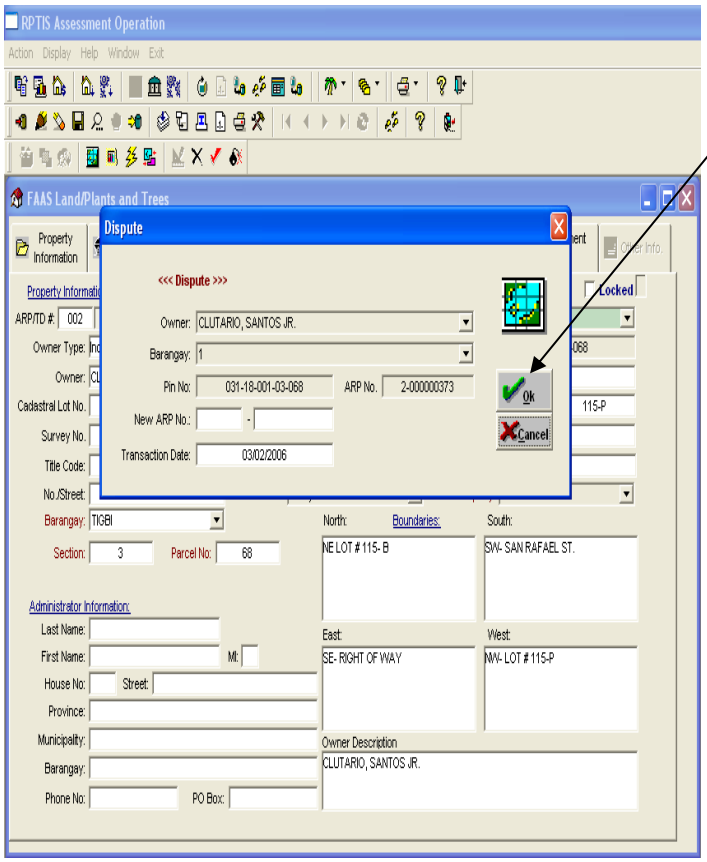

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

# 31 *Dispute*

**Please follow the steps in Figure 9 to 11.**

From the selected record in FAAS window select dispute as transaction from the dropdown selection.

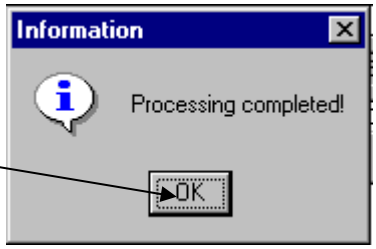

Upon clicking on dispute as transaction code this popup window will be displayed. Input necessary data of the FAAS being reclassified, then click Ok button to close this window.

Click on Yes button to Effect the dispute

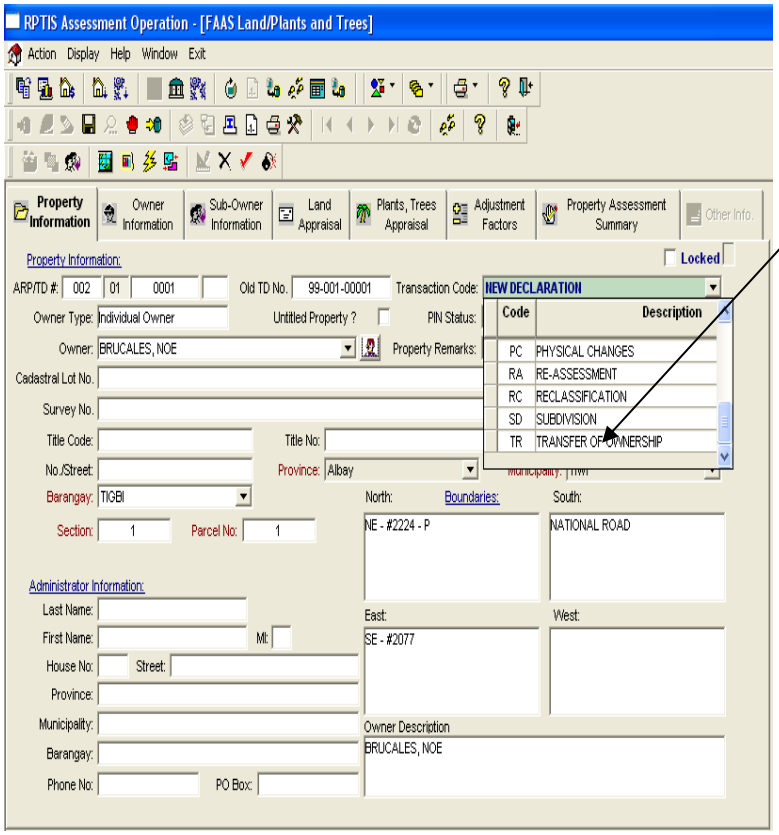

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

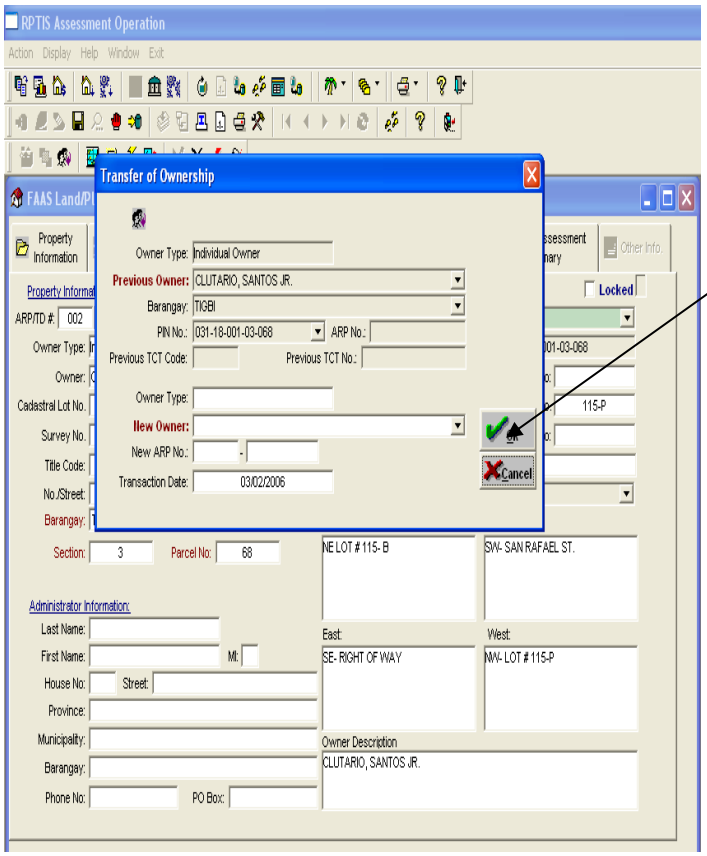

# 32 *Transfer of Ownership*

**Please follow the steps in Figure 9 to 11.**

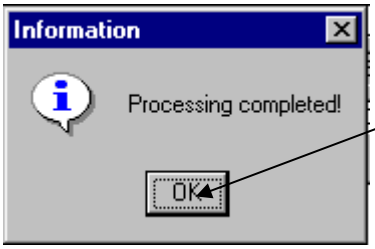

From the selected record in FAAS window select transfer of ownership as transaction from the dropdown selection.

Upon clicking on transfer of ownership as transaction code this popup window will be displayed. Input necessary data such as the new owner and ARP number of the FAAS being transfer, then click Ok button to close this window.

Click on Yes button to Effect the transfer

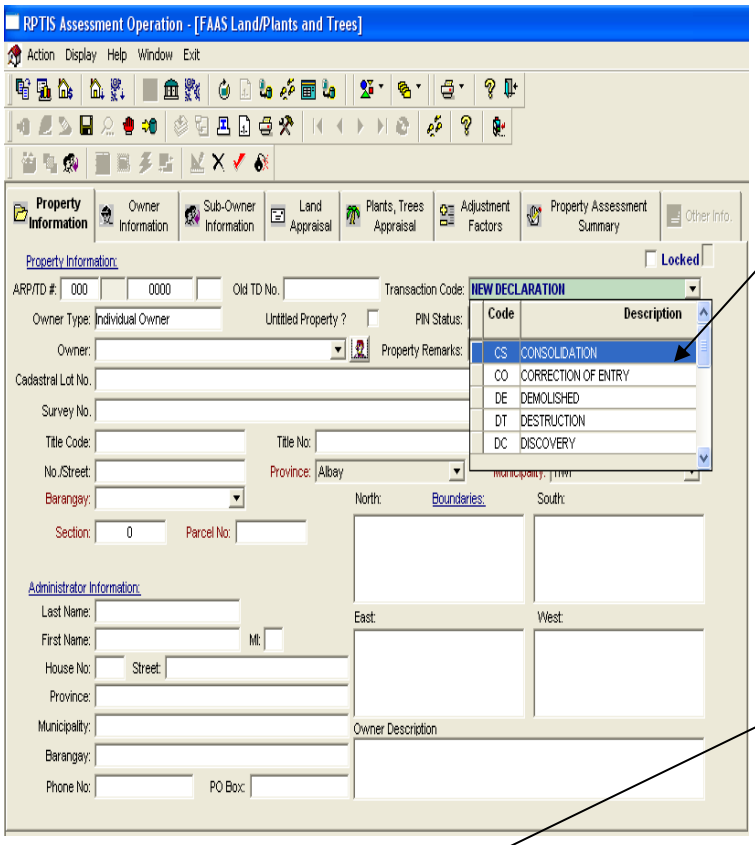

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

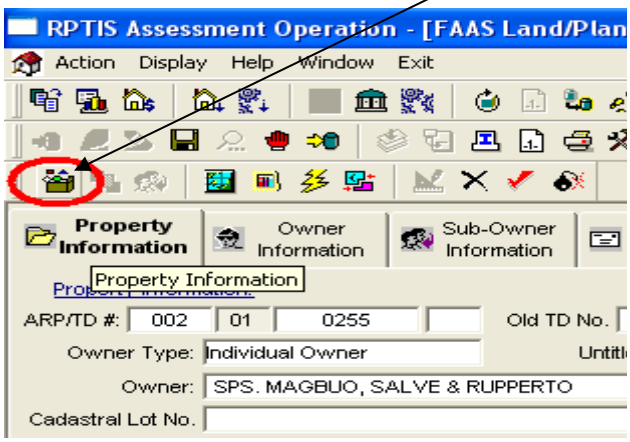

# 33 Consolidation

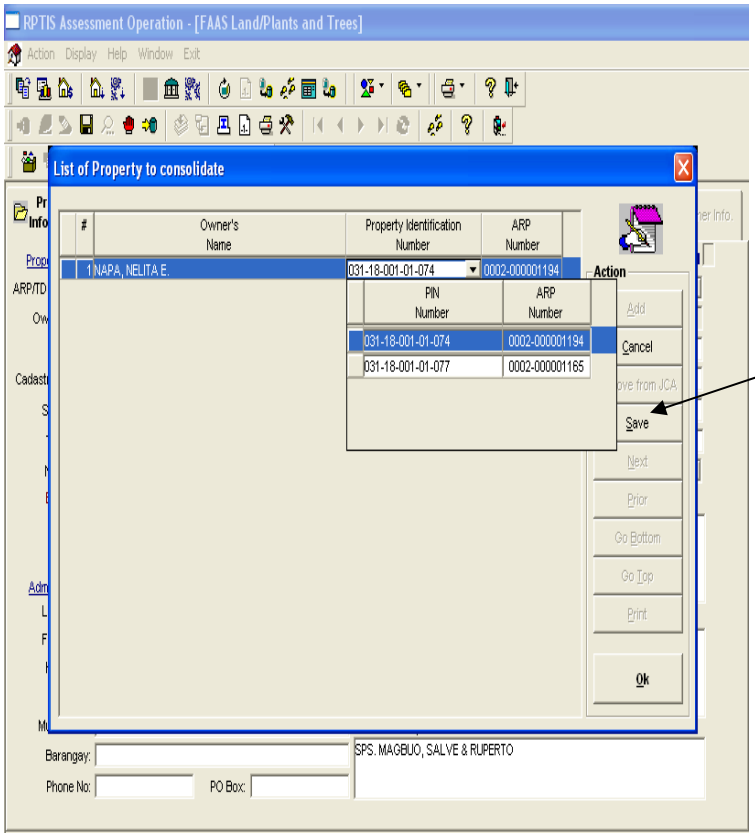

**Please follow the steps in Figure 9 to 11.**

From the selected record in FAAS window select consolidation as transaction from the dropdown selection.

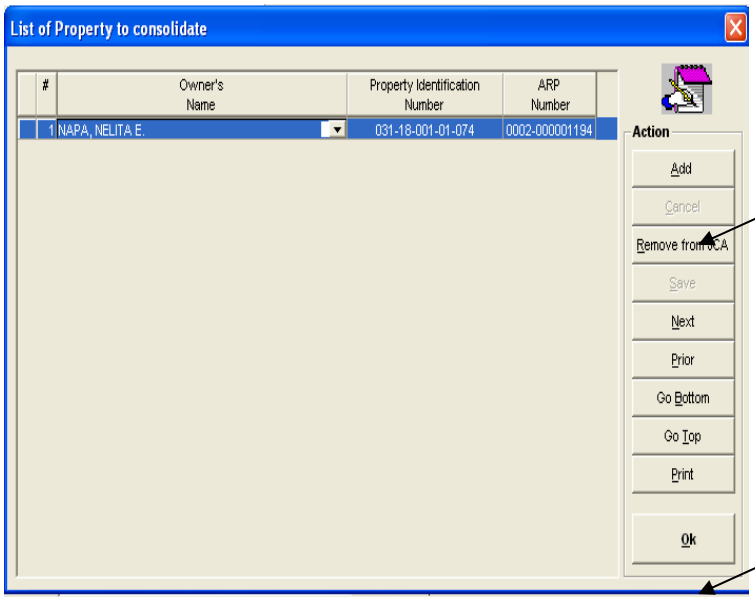

Click the consolidation icon from the toolbar.

Upon clicking on consolidation icon this popup window will be displayed. Click the Add button specify the owner, PIN and ARP number of the FAAS being consolidate, then click Save.

Click on Yes button to Effect the consolidation.

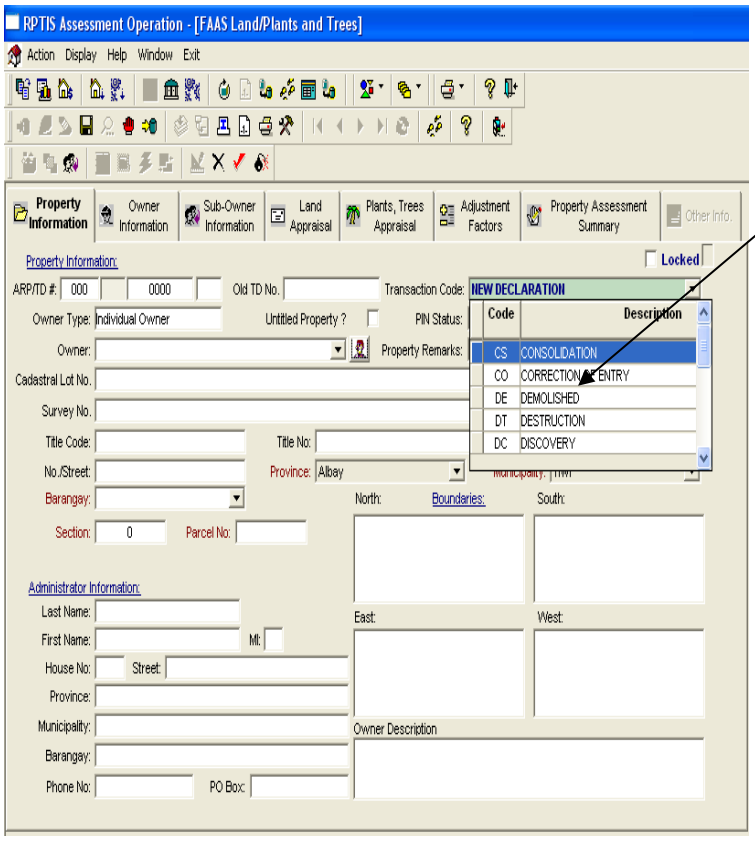

Click the Remove from JCA button to set the PIN to current and remove the previously selected from JCA.

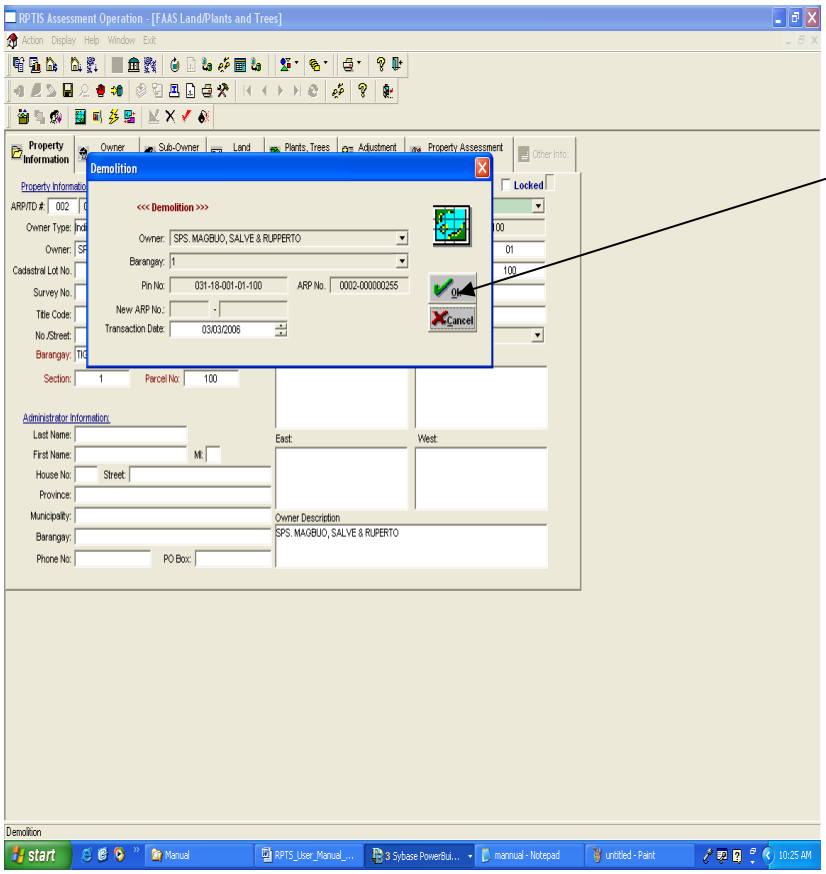

Click Ok to close this dialog box and return to the FAAS window. Continue inputting the assessment information .

# 34 Demolition

**Please follow the steps in Figure 9 to 11.**

From the selected record in FAAS window select demolished as transaction from the dropdown selection.

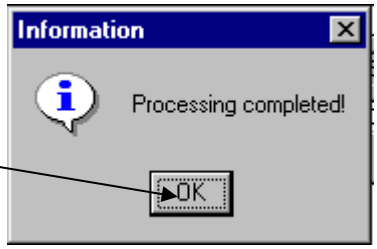

Upon clicking on demolition as transaction code this popup window will be displayed. Input the transaction date of being demolished, then click Ok button to close this window.

Click on Yes button to Effect the demolition

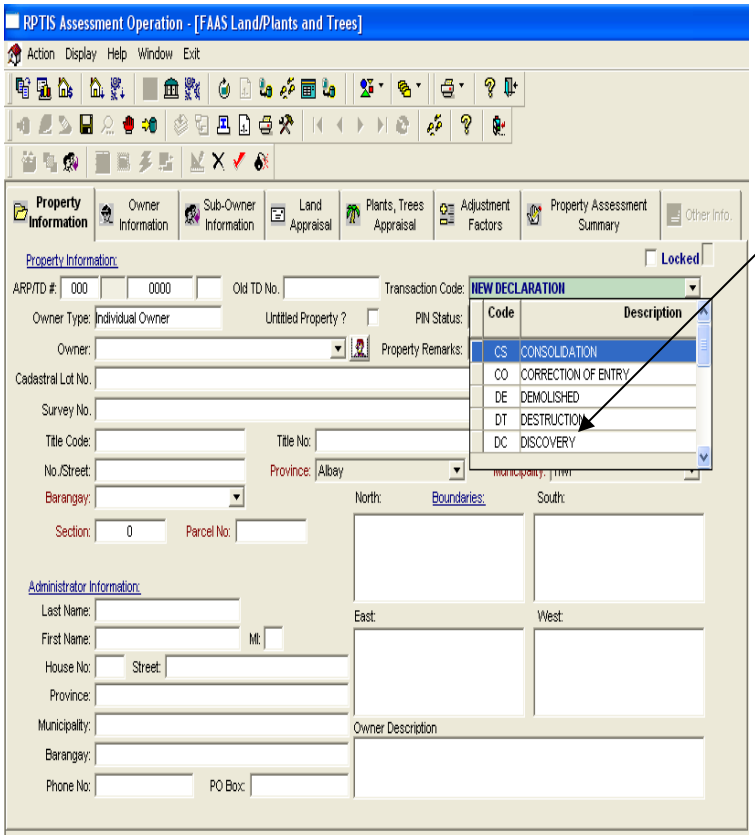

Upon saving this response window will be displayed indicating that the process had been completed. In effect, a new FAAS entry was created canceling the old one.

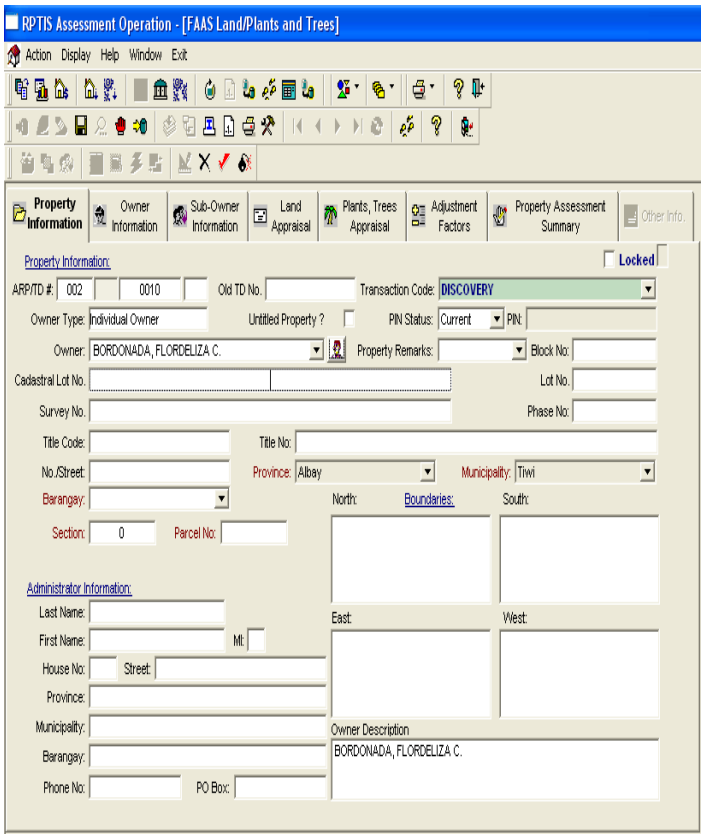

# 35 Discovery

**Please follow the steps in Figure 9 to 11.**

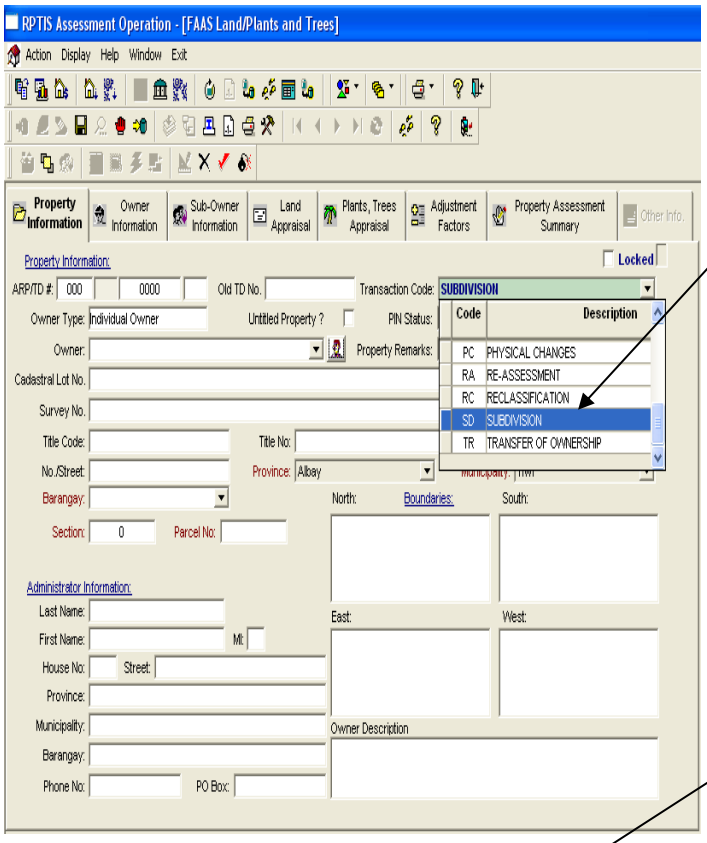

From the FAAS window click the Add icon and select discovery as transaction from the dropdown selection.

Upon clicking on discovery as transaction, continue the encoding of assessment information.

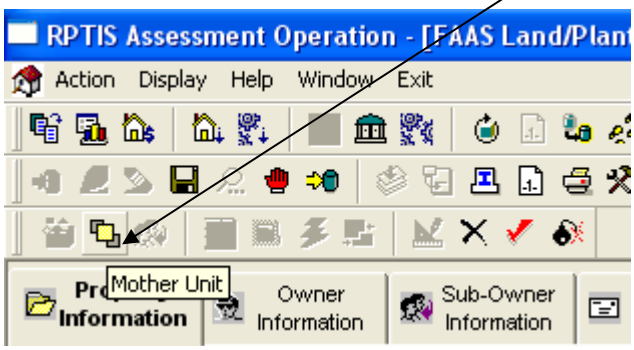

# 36 *Subdivision*

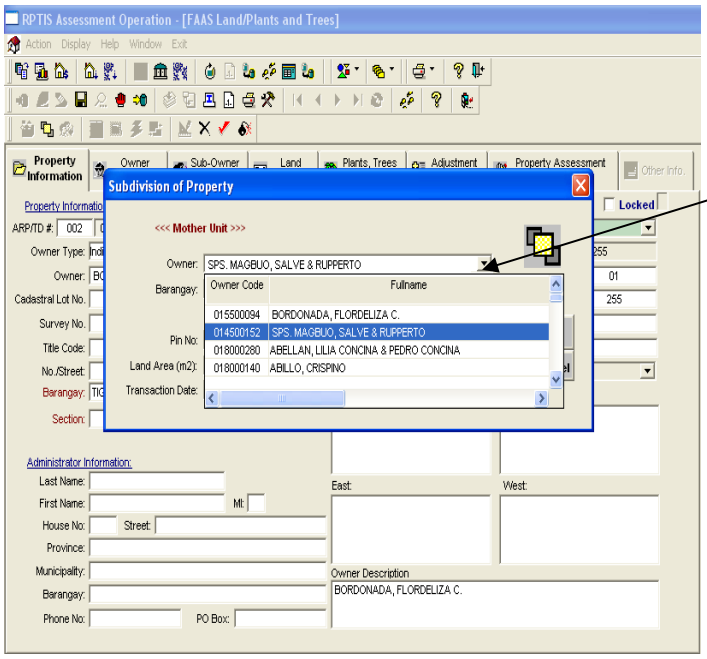

**Please follow the steps in Figure 9 to 11.**

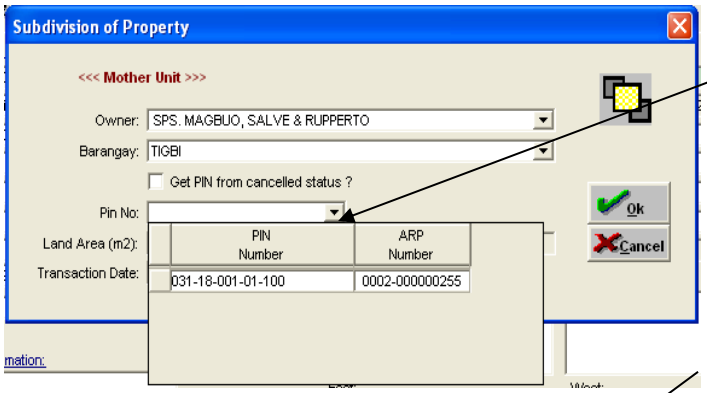

From the selected record in FAAS window select subdivision as transaction from the dropdown selection.

Click the mother unit icon from the toolbar to identify which property is being subdivided

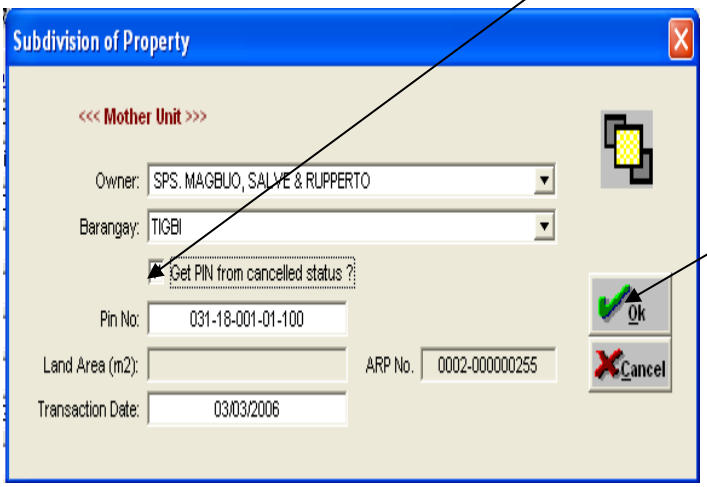

Upon clicking on mother unit icon this popup window will be displayed. Click the owner dropdown list box to specify the owner.

Click on the PIN dropdown listbox to set the PIN as mother unit being subdivided.

You can click on the check box name "**Get PIN from cancelled status**" once the mother unit was cancelled which means you are looking for the old PIN

Click Ok to close this dialog box and return to the FAAS window. Continue inputting the assessment information for the newly subdivided property
